Paper Handling

- Load Paper
- Paper Settings
- Unscannable and Unprintable Areas
  The figures in the table show maximum unscannable and unprintable areas from the edges of the most commonly-used paper sizes. These measurements may vary depending on the paper size or settings in the application you are using.
- Using Special Paper
  Always test paper samples before purchasing them to ensure desirable performance.
- Load Documents
  You can send a fax, make copies and scan from the Automatic Document Feeder (ADF) and from the scanner glass.

Load Paper

- Load and Print using the Paper Tray
- Load and Print Paper in the Manual Feed Slot

Load and Print using the Paper Tray

- If the Check Size setting is set to On and you pull the paper tray out of the machine, a message appears on the LCD asking if you want to change the paper size. Change the paper size and paper type settings if needed, following the on-screen instructions.
- When you load a different paper size in the tray, you must change the paper size setting in the machine or on your computer at the same time.

1. Pull the paper tray completely out of the machine.

2. Press and slide the paper guides to fit the paper.
   Press the release levers to slide the paper guides.
NOTE: For Legal or Folio size paper, press the release button (1) in the bottom of the paper tray and then pull out the back of the paper tray. (Legal and Folio size paper are not available in some regions.)

3. Fan the stack of paper well.
4. Load paper with the printing surface face down in the paper tray.
   
   **NOTE:** DO NOT load different types of paper in the paper tray at the same time. Doing this may cause the paper to jam or misfeed.
5. Make sure the paper is below the "MAX" mark. Overfilling the paper tray will cause paper jams.

6. Slowly push the paper tray completely into the machine.

7. Lift the flap to prevent paper from sliding off the output tray.

8. Send your print job to the machine.

**NOTE:** Change your print preferences in the Print dialog box before sending the print job from your computer.
Load and Print Paper in the Manual Feed Slot

Load and Print Plain Paper, Thin Paper, Recycled Paper and Bond Paper in the Manual Feed Slot

When you load a different paper size in the tray, you must change the paper size setting in the machine or on your computer at the same time.

1. Lift the support flap to prevent paper from sliding off the face-down output tray.

2. Open the manual feed slot cover.
3. Use both hands to slide the manual feed slot paper guides to fit the width of the paper you are using.

4. Using both hands, put one full sheet of paper in the manual feed slot until the front edge touches the paper feed roller. When you feel the machine pull it in, let go.

**NOTE:** Load paper into the manual feed slot with the printing surface facing up.

**NOTE:** Make sure the paper is straight and in the correct position in the manual feed slot. If it is not, the paper may not be fed correctly, resulting in a skewed printout or a paper jam.

**NOTE:** To remove a small printout from the output tray, use both hands to lift up the scanner cover.
NOTE: You can still use the machine while the scanner cover is up. To close the scanner cover, push it down with both hands.

5. Send your print job to the machine.

   NOTE: Change your print preferences in the Print screen before sending the print job from your computer.

6. After the printed page comes out from the machine, load the next sheet of paper in the manual feed slot.
   Repeat for each page that you want to print.

Load and Print on Thick Paper and Labels in the Manual Feed Slot

When you load a different paper size in the tray, you must change the paper size setting in the machine or on your computer at the same time.

1. Open the machine's back cover (the face-up output tray).
**NOTE:** The machine automatically turns on Manual Feed mode when you load paper in the manual feed slot.

2. On the front of the machine, open the manual feed slot cover.

3. Use both hands to slide the manual feed slot paper guides to fit the width of the paper that you are using.

4. Using both hands, put one full sheet of paper in the manual feed slot until the front edge touches the paper feed roller. When you feel the machine pull it in, let go.
NOTE: Load paper into the manual feed slot with the printing surface facing up.

NOTE: Pull the paper out completely if you must reload the paper into the manual feed slot.

NOTE: Do not put more than one sheet of paper in the manual feed slot at one time, as it may cause a jam.

NOTE: Make sure the paper is straight and in the correct position in the manual feed slot. If it is not, the paper may not be fed correctly, resulting in a skewed printout or a paper jam.

5. Send your print job to the machine.
   NOTE: Change your print preferences in the Print screen before sending the print job from your computer.

6. After the printed page comes out from the back of the machine, load the next sheet of paper in the manual feed slot. Repeat for each page that you want to print.

7. Close the back cover (the face-up output tray) until it locks in the closed position.

Load and Print on Envelopes in the Manual Feed Slot

When you load a different paper size in the tray, you must change the paper size setting in the machine or on your computer at the same time.

1. Open the machine's back cover (the face-up output tray).

   NOTE: The machine automatically turns on Manual Feed mode when you load paper in the manual feed slot.

2. Pull down the two levers, one on the left side and one on the right side, as shown in the illustration.
3. On the front of the machine, open the manual feed slot cover.

4. Use both hands to slide the manual feed slot paper guides to fit the width of the paper that you are using.

5. Using both hands, put one envelope in the manual feed slot until the front edge touches the paper feed roller. When you feel the machine pull it in, let go.
NOTE: Load the envelope into the manual feed slot with the printing surface facing up.

NOTE: Pull the envelope out completely when you reload the envelope into the manual feed slot.

NOTE: Do not put more than one envelope in the manual feed slot at one time, as it may cause a jam.

NOTE: Make sure the envelope is straight and in the correct position on the manual feed slot. If it is not, the envelope may not be fed correctly, resulting in a skewed printout or a paper jam.

6. Send your print job to the machine.

NOTE: Change your print preferences in the Print dialog box before sending the print job from your computer.

**Paper Settings**

- Change the Paper Size
  When you change the size of the paper you load in the tray, you must change the paper size setting on the LCD at the same time.
- Change the Paper Type
  To get the best print quality, set the machine for the type of paper you are using.
- Set the Check Size
Your Dell machine's Check Size setting causes the machine to display a message when you remove the paper tray
from the machine, asking if you changed the paper size.

Change the Paper Size

When you change the size of the paper you load in the tray, you must change the paper size setting on the LCD at
the same time.

1. Press Menu.
2. Press ▲ or ▼ to display the General Setup option, and then press OK.
3. Press ▲ or ▼ to display the Paper option, and then press OK.
4. Press ▲ or ▼ to display the Paper Size option, and then press OK.
5. Press ▲ or ▼ to display the Letter, Legal, Executive, A5, A5 L, A6, Folio, or A4 option, and then press OK.
6. Press Cancel.

Change the Paper Type

To get the best print quality, set the machine for the type of paper you are using.

1. Press Menu.
2. Press ▲ or ▼ to display the General Setup option, and then press OK.
3. Press ▲ or ▼ to display the Paper option, and then press OK.
4. Press ▲ or ▼ to display the Paper Type option, and then press OK.
5. Press ▲ or ▼ to display the Thin, Plain, Thick, Thicker, or Recycled Paper option, and then press OK.
6. Press Cancel.

Set the Check Size

Your Dell machine's Check Size setting causes the machine to display a message when you remove the paper tray
from the machine, asking if you changed the paper size.

The default setting is On.

1. Press Menu.
2. Press ▲ or ▼ to display the General Setup option, and then press OK.
3. Press ▲ or ▼ to display the Paper option, and then press OK.
4. Press ▲ or ▼ to display the Check Size option, and then press OK.
5. Press ▲ or ▼ to select the On or Off option, and then press OK.
6. Press Cancel.
Unscannable and Unprintable Areas

The figures in the table show maximum unscannable and unprintable areas from the edges of the most commonly-used paper sizes. These measurements may vary depending on the paper size or settings in the application you are using.

**NOTE:** Do not attempt to scan, copy, or print into these areas; your output will not reflect anything in these areas.

Using Special Paper

Always test paper samples before purchasing them to ensure desirable performance.

**WARNING**

Do not use conductive paper such as origami paper, carbonic paper or conductively-coated paper. When paper jam occurs, it may cause short-circuit and eventually a fire accident.

- DO NOT use inkjet paper; it may cause a paper jam or damage your machine.
- If you use bond paper, paper with a rough surface, or paper that is wrinkled or creased, the paper may exhibit degraded performance.
IMPORTANT

Some types of paper may not perform well or may cause damage to your machine. DO NOT use paper:

• that is highly textured
• that is extremely smooth or shiny
• that is curled or warped
• that is coated or has a chemical finish
• that is damaged, creased or folded
• that exceeds the recommended weight specification in this guide
• with tabs and staples
• with letterheads using low temperature dyes or thermography
• that is multipart or carbonless
• that is designed for inkjet printing

If you use any of the types of paper listed above, they may damage your machine. This damage is not covered under any Dell warranty or service agreement.

Load Documents

You can send a fax, make copies and scan from the Automatic Document Feeder (ADF) and from the scanner glass.

• Load Documents in the Automatic Document Feeder (ADF)
  Use the ADF when copying or scanning multiple-page, standard-sized documents.

• Load Documents on the Scanner Glass
  Use the scanner glass to fax, copy, or scan one page at a time.

Load Documents in the Automatic Document Feeder (ADF)

Use the ADF when copying or scanning multiple-page, standard-sized documents.

• The ADF can hold up to 35 pages and feed each sheet individually.
• Use standard 20 lb (80 g/m²) paper.
• Make sure documents with correction fluid or written in ink are completely dry.

IMPORTANT

• DO NOT leave thick documents on the scanner glass. If you do this, the ADF may jam.
• DO NOT use paper that is curled, wrinkled, folded, ripped, stapled, paper-clipped, pasted, or taped.
• DO NOT use cardboard, newspaper, or fabric.
• To avoid damaging your machine while using the ADF, DO NOT pull on the document while it is feeding.

1. Unfold the ADF document support.
   Lift and unfold the ADF document output support flap.

2. Fan the pages well.

3. Stagger the pages of your document and load it face up and top edge first, into the ADF as shown in the illustration.

4. Adjust the paper guides to fit the width of your document.

**Load Documents on the Scanner Glass**

Use the scanner glass to fax, copy, or scan one page at a time.

**NOTE:** To use the scanner glass, the ADF must be empty.

1. Lift the document cover.

2. Place the document on the scanner glass face down.
3. Place the corner of the page in the upper left corner of the scanner glass.

4. Close the document cover.
   If the document is a book or is thick, gently press on the document cover.

• Print from Your Computer (Windows®)
• Print from Your Computer (Macintosh)
• Adjust Print Settings from the Machine's Control Panel

Before Printing

Before attempting any printing operation, confirm the following:
• The instructions for printer driver are described based on PCL driver. Since the XPS printer driver is installed as the default printer driver for Windows® 8, the function may vary from the instructions on this user guide.
• For USB or network cable users: Make sure the interface cable is physically secure.

Simultaneous printing, scanning and faxing

Your machine can print from your computer while sending or receiving a fax in memory or while scanning a document into the computer. Fax sending will not be stopped during printing from your computer. However, when the machine is copying or receiving a fax on paper, it pauses the printing operation, and then continues printing when copying or fax receiving has finished.

NOTE: Dell E514dw does not support the fax feature.

Firewall (Windows®)

If your computer is protected by a firewall and you are unable to network print, network scan, or PC-FAX, you may need to configure the firewall settings. If you are using any other personal firewall software, see the User's Guide for your software or contact the software manufacturer.

Print from Your Computer (Windows®)

Basic Printing Methods (Windows®)

• Print a Document (Windows®)
• Print Preview (Windows®)
• Change the Paper Size (Windows®)
  The Paper Size options offer a large selection of standard paper sizes.
• Change the Orientation of Your Print (Portrait or Landscape) (Windows®)
• Print Multiple Copies of the Same Document (Windows®)
• Change the Media Type (Windows®)
  To achieve the best print results, the media being printed on should be selected in the driver. The machine changes the way it prints depending on the selected media type.
• Change the Resolution (Windows®)
  You can choose the print resolution. As print resolution and speed are related, the higher the resolution, the longer it will take to print the document.
• Change the Print Settings (Windows®)
The Print Settings selection lets you choose the print resolution. As print quality and speed are related, the higher the quality, the longer it takes to print the document.

- **Improve Gray Printing (Windows®)**
  You can improve the image quality of a shaded area.

- **Improve Pattern Printing (Windows®)**
  You can improve the pattern printing if printed fills and patterns are different from the fills and patterns you see on your computer screen.

- **Improve Thin Line (Windows®)**
  Use this option to improve the image quality of thin lines.

- **Print More Than One Page on a Single Sheet of Paper (N in 1) (Windows®)**

- **Print as a Poster (Windows®)**
  Enlarge your print size and print the document in poster mode.

- **Print on Both Sides of the Paper (Windows®)**

- **Print as a Booklet (Windows®)**
  Use this option to print a document in booklet format using 2-sided printing. The document's pages will be arranged according to the correct page number and will allow you to fold the print output at the center and read the booklet pages numerically, without having to change the order of the printed pages.

- **Change the Paper Source (Windows®)**
  Select a paper source setting that matches your print conditions or purpose.

**Print a Document (Windows®)**

1. Select the print command in your application.

2. Select **Dell MFP EXXXX** (where XXXX is the name of your model), and then click the printing properties or preferences button.
   The printer driver window appears.

3. Make sure you have loaded the correct size paper in the paper tray.

4. Click the **Paper Size** drop-down list, and then select your paper size.

5. In the **Orientation** field, select either **Portrait** or **Landscape** option to set the orientation of your printout.
   NOTE: If your application software contains a similar layout feature, we recommend using the one in the application.

6. Type the number of copies (1-999) you want in the **Copies** field.

7. Click the **Media Type** drop-down list, and then select the type of paper you are using.

8. To print multiple pages on a single sheet of paper or print one page of your document on multiple sheets, click the **Multiple Page** drop-down list, and then select your options.

9. Change other printer settings if needed.

10. Click **OK**.

11. Complete your print operation.
Print Preview (Windows®)

1. Select the print command in your application.
2. Select Dell MFP XXXX (where XXXX is the name of your model), and then click the printing properties or preferences button.
   The printer driver window appears.
3. Select the Print Preview check box.
4. Change other printer settings if needed.
5. Click OK.
6. Click the proceed or next button in your application dialog box.
   The PrintPreview viewer opens before printing starts.
7. Select the page(s) you want to print from the list in the Print Page field.
   The print results will be displayed in the preview area. By default, all pages are selected. To print only some pages, clear the check boxes for the pages you do not want to print.
   **NOTE:** If the 2-sided / Booklet setting is selected in the printer driver, you cannot select the Print Page check box.
8. Click File, and then click Print to start printing.

Change the Paper Size (Windows®)

The Paper Size options offer a large selection of standard paper sizes.

1. Select the print command in your application.
2. Select Dell MFP XXXX (where XXXX is the name of your model), and then click the printing properties or preferences button.
   The printer driver window appears.
3. Click the Paper Size drop-down list, and then select your paper size.

  Print a logo or text onto your document as a watermark. Select one of the preset watermarks, add a new watermark, or use an image file you have created.

• Print the Date, Time and PC Login User Name on the Document (Header-Footer Print) (Windows®)

• Use a Macro from Your Computer (Windows®)
  If you have stored the electronic forms (macros) in your machine’s memory, you can use the macro to print the data as an overlay on the print job you want.

• Adjust the Print Density (Windows®)
  You can increase or decrease the print density.

• Reduce Paper Curl (Windows®)

• Improve Toner Fixing (Windows®)

• Skip Blank Page (Windows®)
  Use this option to allow the printer driver to automatically detect blank pages and exclude them from printing.

• Print Text in Black (Windows®)
  Use this option when you want to print color text in black.

• Save an Archive File of the Print Data (Windows®)
  Print data can be saved as a PDF file to your computer.

Print in Toner Save Mode (Windows®)

This feature conserves your toner by using less toner to print documents; print appears lighter, but is still readable.

NOTE: We do not recommend using this mode for printing photo or grayscale images.

1. Select the print command in your application.

2. Select Dell MFP EXXX (where XXXX is the name of your model), and then click the printing properties or preferences button.
The printer driver window appears.
3. Click the **Advanced** tab.
4. Select the **Toner Save Mode** check box.
5. Change other printer settings if needed.

     d. If you select the **Use Image File** option:
       
       • Type the file name and location of your image in the **File** field or click the **Browse** button to search for the file.
       
       • Once an image selected, you can scale the size of the image.
     
     e. To move the position of the watermark on the page, adjust it in the **Position** field.
   
   - To modify an existing watermark, select the watermark, and then click the **Settings** button.

**Bring To Front**

This option will overlay the watermark on your printed document.

**In Outline Text**

Select the In Outline Text check box to print only an outline of the watermark. This feature is available only when using a text watermark.

**Custom Settings**

Select where your watermark will print. Include it on all pages, on the first page only, or on all pages except the first page.

6. Click **OK**.
7. Change other printer settings if needed.
8. Click **OK**.
9. Complete your print operation.
1. Select the print command in your application.

2. Select **Dell MFP EXXX** (where XXXX is the name of your model), and then click the printing properties or preferences button.
   The printer driver window appears.

3. Click the **Advanced** tab.

4. Select the **Header-Footer Print** check box, and then click the **Settings** button.

5. Select the options you want from the following settings: **Format**, **Position**, **Font** and **Background**.

   **ID Print**
   Select your computer login user name or custom text as a header or footer using one of the following methods:
   - Select the **Login User Name** option to print your computer login user name.
   - Select the **Custom** option to print the text you enter in the **Custom** field.

6. Click **OK** to return to the printer driver window.

7. Change other printer settings if needed.

8. Click **OK**.

9. Complete your print operation.

**Use a Macro from Your Computer (Windows®)**

If you have stored the electronic forms (macros) in your machine’s memory, you can use the macro to print the data as an overlay on the print job you want.

1. Select the print command in your application.

2. Select **Dell MFP EXXX** (where XXXX is the name of your model), and then click the printing properties or preferences button.
   The printer driver window appears.

3. Click the **Advanced** tab.

4. Click the **Other Print Options** button.

5. Select **Macro**.

6. Click the **Macro Settings** button.
7. Enter **Macro ID** and **Macro Name** you want to use.

5. Select **Density Adjustment**.

6. Clear the **Printer Default** check box.

7. To increase or decrease the print density, move the slide bar to the right or left.

8. Click **OK** to return to the printer driver window.

9. Click **OK**.

10. Complete your print operation.
Reduce Paper Curl (Windows®)

If you are printing only a few pages, you do not need to select this setting. If paper curls excessively, we recommend changing the Media Type setting in the printer driver to the Thin Paper or Env. Thin setting.

**NOTE:** This setting decreases the temperature of the machine's fusing process, which reduces paper curl.

1. Select the print command in your application.
2. Select Dell MFP XXXX (where XXXX is the name of your model), and then click the printing properties or preferences button.
   The printer driver window appears.
3. Click the Advanced tab.
4. Click the Other Print Options button.
5. Select the Improve Print Output option from the Printer Function list.
6. Select the Reduce Paper Curl radio button.
7. Click OK to return to the printer driver window.
8. Click OK.
9. Complete your print operation.

Improve Toner Fixing (Windows®)

**NOTE:** This setting increases the temperature of the machine’s fusing process, which improves toner’s ability to stick to paper.
1. Select the print command in your application.

2. Select **Dell MFP EXXXX** (where XXXX is the name of your model), and then click the printing properties or preferences button.
   The printer driver window appears.

3. Click the **Advanced** tab.

4. Click the **Other Print Options** button.

5. Select the **Improve Print Output** option from the **Printer Function** list.

6. Select the **Improve Toner Fixing** radio button.

7. Click **OK** to return to the printer driver window.

8. Click **OK**.

9. Complete your print operation.

   If this selection does not provide enough improvement, change the **Media Type** setting in the printer driver to the **Thick Paper** or **Env. Thick** setting.

**Skip Blank Page (Windows®)**

Use this option to allow the printer driver to automatically detect blank pages and exclude them from printing.

This option does not work if the following settings are active:

- **Use Watermark**
- **Header-Footer Print**
- **N in 1** or **1 in NxN Pages** in the **Multiple Page** drop-down list
- **2-sided (Manual), Booklet, Booklet (Manual) and Binding Offset**.

1. Select the print command in your application.

2. Select **Dell MFP EXXXX** (where XXXX is the name of your model), and then click the printing properties or preferences button.
   The printer driver window appears.

3. Click the **Advanced** tab.

4. Click the **Other Print Options** button.

5. Select the **Skip Blank Page** option from the **Printer Function** list.

6. Select the **Skip Blank Page** check box.

7. Click **OK** to return to the printer driver window.

8. Click **OK**.

9. Complete your print operation.

**Print Text in Black (Windows®)**

Use this option when you want to print color text in black.
NOTE: The Print Text in Black option may not work with certain data.

1. Select the print command in your application.
2. Select Dell MFP EXXXX (where XXXX is the name of your model), and then click the printing properties or preferences button.
   The printer driver window appears.
3. Click the Advanced tab.
4. Click the Other Print Options button.
5. Select the Print Text in Black option from the Printer Function list.
6. Select the Print Text in Black check box.
7. Click OK to return to the printer driver window.
8. Click OK.
9. Complete your print operation.

Save an Archive File of the Print Data (Windows®)

Print data can be saved as a PDF file to your computer.

1. Select the print command in your application.

4. Click the Advanced print settings list.
5. Select the Improve Print Output option.
6. Select the Reduce Paper Curl option.
7. Click Print.

Improve Toner Fixing (Macintosh)

**NOTE:** This setting increases the temperature of the machine’s fusing process, which improves toner’s ability to stick to paper.

1. From an application, such as Apple TextEdit, click the File menu, and then select Print.
2. Select Dell MFP EXXXX (where XXXX is your model name).
NOTE: For more page setup options, click the Show Details button.

3. Click the application pop-up menu, and then select Print Settings. The Print Settings options appear.
4. Click the Advanced print settings list.
5. Select the Improve Print Output option.
6. Select Improve Toner Fixing.
7. Click Print.

Adjust the Print Density (Macintosh)

You can increase or decrease the print density.
1. From an application, such as Apple TextEdit, click the File menu, and then select Print.
2. Select Dell MFP EXXXX (where XXXX is your model name).
   NOTE: For more page setup options, click the Show Details button.
3. Click the application pop-up menu, and then select Print Settings. The Print Settings options appear.
4. Click the Advanced print settings list.
5. Click Density Adjustment.
6. Clear the Printer Default check box.
7. To increase or decrease the print density, move the slide bar to the right or left.

**Monitor the Status of the Machine from Your Computer (Macintosh)**

The Status Monitor utility is a configurable software tool for monitoring the status of a device, allowing you to get immediate notification of error messages, such as paper empty or paper jam, at pre-set update intervals. You can also access Web Based Management.

1. Click the System Preferences menu, select Print & Scan or Printers & Scanners, and then select your machine.
2. Click the Options & Supplies button.
3. Click the Utility tab, and then click the Open Printer Utility button.
   Status Monitor starts.
   **Updating the machine’s status**
   To view the latest machine status while the Status Monitor window is open, click the icon. You can set the interval at which the software updates machine status information. Click Status Monitor in the menu bar, and then select Preferences.
   **Web Based Management (Network Connection Only)**
   Access the Web Based Management System by clicking the machine icon on the Status Monitor screen. You can use a standard Web Browser to manage your machine using HTTP (Hyper Text Transfer Protocol).

**Adjust Print Settings from the Machine’s Control Panel**

• Cancel a Print Job
• Change the Printer Emulation Mode
We recommend setting Printer Emulation mode using your application software or network server. If the setting does not work correctly, select the required emulation mode manually using the machine's control panel.

- Change 2-Sided Print Settings
  Change the settings for printing on both sides of the paper from your machine's control panel.
- Auto Continue
  This setting enables the machine to automatically clear a paper size error and use any compatible paper from other paper trays to complete the print job.
- Restore Printer Factory Settings
  Use this function to return the machine's printer settings to the factory settings.
- Print the Internal Font List
  Print a list of the machine's internal (also called resident) fonts to see how each font looks before you select it.
- Print a List of Printer Settings
- Test Print
  If there are problems with print quality, follow these instructions to do a test print.

**Cancel a Print Job**

1. Press **Cancel**.

**Change the Printer Emulation Mode**

We recommend setting Printer Emulation mode using your application software or network server. If the setting does not work correctly, select the required emulation mode manually using the machine's control panel.

Your machine will receive print commands in a printer job language, or emulation. Different operating systems and applications send the print commands in different languages. Your machine can receive print commands in a variety of emulations and has an automatic emulation selection feature. When the machine receives data from the computer, it automatically selects the emulation mode. The default setting is Auto.

**PCL Setting Mode**

PCL Setting mode is the emulation mode in which this printer supports the PCL6 language of a Hewlett-Packard LaserJet laser printer. Many applications support this type of laser printer. Using this mode will allow your machine to run at its best with those applications.

**Dell emulate PS Mode**

Dell emulate PS is an original Dell page description language and a PostScript® language emulation interpreter. This machine supports PostScript® 3™. The Dell emulate PS interpreter of this machine allows you to control text and graphics on the page.

For technical information about PostScript® commands, see the following manuals:

1. Press **Menu**.
2. Press ▲ or ▼ to display the Printer option, and then press OK.
3. Press ▲ or ▼ to display the Emulation option, and then press OK.
4. Select the emulation mode you want.
5. Press Cancel.

**Change 2-Sided Print Settings**

Change the settings for printing on both sides of the paper from your machine's control panel.

Settings in the printer driver always take priority over settings you change manually on the control panel. If you do not print 2-sided frequently, select None for the 2-sided / Booklet pull down list in the printer driver, and use the control panel to turn it on manually only when you want to print on both sides of the paper.

1. Press Menu.
2. Press ▲ or ▼ to display the Printer option, and then press OK.
3. Press ▲ or ▼ to display the 2-sided option, and then press OK.
4. Press ▲ or ▼ to display the Off, On(Long Edge), or On(Short Edge) option, and then press OK.
5. Press Cancel.

**Auto Continue**

This setting enables the machine to automatically clear a paper size error and use any compatible paper from other paper trays to complete the print job.

1. Press Menu.
2. Press ▲ or ▼ to display the Printer option, and then press OK.
3. Press ▲ or ▼ to display the Auto Continue option, and then press OK.
4. Press ▲ or ▼ to display the On or Off option, and then press OK.
5. Press Cancel.

**Restore Printer Factory Settings**

Use this function to return the machine's printer settings to the factory settings.

This will not reset the network settings.

1. Press Menu.
2. Press ▲ or ▼ to display the Printer option, and then press OK.
3. Press ▲ or ▼ to display the Reset Printer option, and then press OK.
4. Follow the machine's instruction to reset printer settings.
5. Press Cancel.
Print the Internal Font List

Print a list of the machine's internal (also called resident) fonts to see how each font looks before you select it.

1. Press Menu.
2. Press ▲ or ▼ to display the Printer option, and then press OK.
3. Press ▲ or ▼ to display the Print Options option, and then press OK.
4. Press ▲ or ▼ to display the INTERNAL FONT option, and then press OK.
5. Press the PCL Setting or PS Emulate option.
6. Press Cancel.

Print a List of Printer Settings

1. Press Menu.

Scan

• Before Scanning
• Scan Using the Scan Button on Your Dell Machine
• Scan from Your Computer (Windows®)
• Scan from Your Computer (Macintosh)

There are several ways you can use your Macintosh to scan photos and documents on your Dell machine. Use the software applications provided by Dell or your favorite scanning application.

Before Scanning

Before attempting to scan, confirm the following:
• For USB or network cable users: Make sure the interface cable is correctly inserted.

Configure Network Scanning for Windows®

To use the machine as a network scanner, the machine must be configured with a TCP/IP address.

• If you installed the machine following the instructions for a network user, then the machine should already be configured for your network.
• If your computer is protected by a firewall and is unable to scan when connecting over the network, you may need to configure the firewall settings.

• For network scanning, a maximum of 25 clients can be connected to one machine on a network.

1. Do one of the following:
   • (Windows Vista®)
     Click (Start) > Control Panel > Hardware and Sound > Scanners and Cameras.
   • (Windows® 7)
     Click (Start) > All Programs > Dell Printers.
     Click the drop-down list and select your model name (if not already selected). Click SCAN in the left navigation bar, and then click Scanners and Cameras.
   • (Windows® 8)
     Dell Printer Hub, and then click the drop-down list and select your model name (if not already selected). Click SCAN in the left navigation bar, and then click Scanners and Cameras.

2. Do one of the following:
   • (Windows Vista®, Windows® 7 and Windows® 8)
     Click the Properties button.

   NOTE: (Windows Vista®, Windows® 7 and Windows® 8)
   If the User Account Control screen appears, do the following:
   • For users who have administrator rights: Click Continue or Yes.
3. Click the **Network Setting** tab, and then select the appropriate connection method.
   - **Specify your machine by address.**
     - Type the machine's IP address in the **IP Address** field, and then click **OK**.
   - **Specify your machine by name.**
     - Type the machine's node name in the **Node Name** field, or click **Browse** to search for a device, and then select the machine you want to use. Click **OK**.

4. Click the **Scan To Button** tab, and then type your computer's name in the **Display Name (Max 15 characters)** field. The machine's LCD displays the name you type. The default setting is your computer's name. You can type any name you like.

5. To avoid receiving unwanted documents, type a four-digit PIN in the **Pin number** and **Retype Pin number** fields. To send data to a computer protected by a PIN, the LCD prompts you to enter the PIN before the document can be scanned and sent to the computer.
Configure Network Scanning for Macintosh

To use the machine as a network scanner, the machine must be configured with a TCP/IP address.

- If you installed the machine following the instructions for a network user, the machine should already be configured for your network.
- To use the machine as a network scanner, the machine must be configured with a TCP/IP address. You can set or change the address settings from the machine's control panel.
- To scan from the machine on a network, you must select the networked machine in the Device Selector application.

1. In the Finder menu bar, click Go > Applications > Dell Printers, and then double-click the (ControlCenter) icon.
   The ControlCenter screen appears.
2. Click the Model pop-up menu, and then select Other....
   The Device Selector window appears.
3. Click the + button.
4. Select a machine from the list of available machines, and then click Add. You can also specify your machine by IP address. Click the IP button, and then type the IP address.
5. Click OK.

   **NOTE:** To use the Scan button features on the machine, select the Scan Key Setting check box to register your computer with the “Scan To” features at the machine. Type the name for your Macintosh that you want to be displayed on the machine’s LCD (up to 15 characters).

   **NOTE:** To avoid receiving unwanted documents, select the Enable PIN code protection check box, and then type a four-digit PIN in the PIN code and Verify fields. To send data to a computer protected by a PIN, the LCD prompts you to type the PIN before the document can be scanned and sent to the computer.

Scan Using the Scan Button on Your Dell Machine

- Scan Photos and Graphics
  Send scanned photos or graphics directly to your computer. Dell's ControlCenter software (for Macintosh only) will launch the default graphics application on your computer and open your scanned document automatically.
- Save Scanned Data to a Folder as a PDF File
  Scan documents and save them to a folder on your computer as PDF files.
- Web Services for Scanning on Your Network (Windows Vista® SP2 or greater, Windows® 7 and Windows® 8)
  The Web Services protocol enables Windows Vista® (SP2 or greater), Windows® 7 and Windows® 8 users to scan using a Dell machine on the network. You must install the driver via Web Services.
- Change Scan Button Settings from ControlCenter (Macintosh)
Scan Photos and Graphics

Send scanned photos or graphics directly to your computer. Dell's ControlCenter software (for Macintosh only) will launch the default graphics application on your computer and open your scanned document automatically.

Use the Scan button on the machine to make temporary changes to the scan settings. To make permanent changes, use Dell's ControlCenter software (for Macintosh only).

1. Load your document.
2. Press (Scan).
3. Press ▲ or ▼ to select the Scan to PC option, and then press OK.
4. Press ▲ or ▼ to select the Image option, and then press OK.
5. If the machine is connected over the network, select the destination computer.
6. Press OK.
   NOTE: If the LCD prompts you to enter a PIN, enter the four-digit PIN for the destination computer on the LCD.
7. Do one of the following:
   • To change the scan settings for this document, press ▲ or ▼ to select Yes, and then press OK. Go to the next step.
   • To use the default scan settings, press ▲ or ▼ to select No, and then press OK. Press Start.
     The machine starts scanning. If you are using the machine's scanner glass, follow the LCD instructions to complete the scanning job.
     NOTE: In order to change scan settings, Dell's Control Center software (for Macintosh only) must be installed on a computer connected to the machine.
     NOTE: (For Windows) In order to change scan settings, see the FAQ in Dell Printer Hub software.
8. Select the scan settings you want to change:
   • Scan Type
   • Resolution
   • File Type
   • Scan Size
   • Remove Bkg. Clr
     (available only for the Color and Gray options.)
   The machine starts scanning. If you are using the machine's scanner glass, follow the LCD instructions to complete the scanning job.
Save Scanned Data to a Folder as a PDF File

Scan documents and save them to a folder on your computer as PDF files.

Use the Scan button on the machine to make temporary changes to the scan settings. To make permanent changes, use Dell's ControlCenter software (for Macintosh only).

1. Load your document.
2. Press (Scan).
3. Press ▲ or ▼ to select the Scan to PC option, and then press OK.
4. Press ▲ or ▼ to select the File option, and then press OK.
5. If the machine is connected over the network, select the destination computer.
6. Press OK.
   *NOTE:* If the LCD prompts you to enter a PIN, enter the four-digit PIN for the destination computer on the LCD.
7. Do one of the following:
   - To change the scan settings for this document, press ▲ or ▼ to select Yes, and then press OK. Go to the next step.
   - To use the default scan settings, press ▲ or ▼ to select No, and then press OK. Press Start. The machine starts scanning. If you are using the machine's scanner glass, follow the LCD instructions to complete the scanning job.
   *NOTE:* In order to change scan settings, Dell's Control Center software (for Macintosh only) must be installed on a computer connected to the machine.
   *NOTE:* (For Windows) In order to change scan settings, see the FAQ in Dell Printer Hub software.
8. Select the scan settings you want to change:
   - Scan Type
   - Resolution
   - File Type
   - Scan Size
   - Remove Bkg. Clr

   The machine starts scanning. If you are using the machine's scanner glass, follow the LCD instructions to complete the scanning job.

Web Services for Scanning on Your Network (Windows Vista® SP2 or greater, Windows® 7 and Windows® 8)

The Web Services protocol enables Windows Vista® (SP2 or greater), Windows® 7 and Windows® 8 users to scan using a Dell machine on the network. You must install the driver via Web Services.
• Scan Using Web Services from the Dell Machine (Windows Vista® SP2 or greater, Windows® 7 and Windows® 8)

If you have installed the driver for scanning via Web Services, you can access the Web Services scanning menu on your Dell machine's LCD.

• Configure Scan Settings for Web Services

Scan Using Web Services from the Dell Machine (Windows Vista® SP2 or greater, Windows® 7 and Windows® 8)

If you have installed the driver for scanning via Web Services, you can access the Web Services scanning menu on your Dell machine's LCD.

Certain characters in the messages displayed on the LCD may be replaced with spaces if the language settings of your OS and your Dell machine are different.

1. Load your document.

2. Press (Scan).

3. Press ▲ or ▼ to select the Web Service option, and then press OK.

4. Press ▲ or ▼ to select the type of scan you want to do, and then press OK.

5. Press ▲ or ▼ to select the destination computer where you want to send the scan, and then press OK.

6. Press Start.

The machine starts scanning.

Configure Scan Settings for Web Services

1. Do one of the following:
   • (Windows Vista®)
     Click (Start) > Control Panel > Hardware and Sound > Scanners and Cameras.
   • (Windows® 7)
     Click (Start) > Devices and Printers.
   • (Windows® 8)
     Move your mouse to the lower right corner of your desktop. When the menu bar appears, click Settings, and then click Control Panel. In the Hardware and Sound group, click View devices and printers.

2. Do one of the following:
   • (Windows Vista®)
     Click your machine, and then click the Scan Profiles button. The Scan Profiles dialog box appears.
   • (Windows® 7) and (Windows® 8)
     Right-click on the machine icon, and then select Scan profiles... The Scan Profiles dialog box appears.

3. Select the scan profile you want to use.

4. Make sure the scanner selected in the Scanner list is a Dell machine that supports Web Services for scanning,
and then click the **Set as Default** button.

5. Click **Edit**....

The **Edit Default Profile** dialog box appears.

6. Select the **Source, Paper size, Color format, File type, Resolution (DPI), Brightness** and **Contrast** settings.

7. Click the **Save Profile** button.

These settings will be applied when you scan using the Web Services protocol.

If you are requested to select a scanning application, select Windows® Fax and Scan or Windows® Photo Gallery from the list.

### Change Scan Button Settings from ControlCenter (Macintosh)

1. In the **Finder** menu bar, click **Go > Applications > Dell Printers**, and then double-click the **(ControlCenter)** icon.

   The **ControlCenter** screen appears.

2. Hold the Control key on your keyboard and click on the scan destination (**Image, OCR, E-mail**, or **File**) whose settings you want to change.

3. Click the **Device Button** tab.

   The settings for the scan destination that you selected appear.

   The following example shows the **Scan to Image** settings.

   ![Scan to Image settings](image)

   **NOTE:** Each tab corresponds to a scan feature, as described below. These settings can be changed.

Select which application is used to open scanned data. Only applications installed on your computer can be selected.

- **Add**
  - Add an application to the pop-up menu.
  - Type the application name in the *Application Name* field (up to 30 characters) and select your preferred application by clicking the *Browse* button. Select the *File Type* option from the pop-up menu.

- **Delete**
  - Delete an application you have added to the pop-up menu.
  - Select the application from the *Application Name* pop-up menu, and then click *Delete*.

<table>

</tr>
</thead>
</table>

Click *Browse* to select the folder where you would like to save your scanned document.
### Show Folder
Select the **Show Folder** option to automatically display the destination folder after scanning.

### Resolution
Select a scanning resolution from the **Resolution** pop-up menu. Higher resolutions take more memory and transfer time, but produce a finer scanned image.

### Scan Type
Select from a range of scan color depths.
- **Black & White**
  Use for text or line art images.
- **Gray (Error Diffusion)**
  Use for photographic images or graphics. (Error Diffusion is a method for creating simulated gray images without using true gray dots. Black dots are put in a specific pattern to give a gray appearance.)
- **True Gray**
  Use for photographic images or graphics. This mode is more accurate because it uses up to 256 shades of gray.
- **24bit Color**
  Use to create an image with the most accurate color reproduction. This mode uses up to 16.8 million colors to scan the image, but it requires the most memory and has the longest transfer time.
- **Auto**
  Use for any type of document. This mode automatically picks an appropriate color depth for the document.

### Document Size
Select the exact size of your document from the **Document Size** pop-up menu.
- If you select **1 to 2 (A4)**, the scanned image will be divided into two A5-size documents.
Advanced Settings
Configure advanced settings by clicking the Advanced Settings button in the Scan Settings dialog box.

- **Brightness**
  Set the Brightness level by dragging the slider to the right or left to lighten or darken the image. If the scanned image is too light, set a lower brightness level and scan the document again. If the image is too dark, set a higher brightness level and scan the document again.

- **Contrast**
  Increase or decrease the Contrast level by moving the slider to the right or left. An increase emphasizes dark and light areas of the image, while a decrease reveals more details in gray areas. You can also enter a value in the box to set the contrast.

- **Remove Background Color**
  Remove the base color of documents to make the scanned data more recognizable. When you use this function, select from three settings: high, medium, and low. (Available only for the Auto, True Gray and 24bit Color options)

### Restore Defaults
Select this option to restore all settings to their factory setting values.

Scan Documents and Photos Using ControlCenter (Macintosh)

Send scanned photos or graphics directly to your computer. Dell's ControlCenter software (for Macintosh only) will launch the default graphics application on your computer and open your scanned document automatically.

1. Load your document.

2. In the Finder menu bar, click Go > Applications > Dell Printers, and then double-click the (ControlCenter) icon.
   The ControlCenter screen appears.

3. Click the SCAN tab.

4. Click the Image button.
   The scan settings dialog box appears.
5. Change the scan settings, such as file format, file name, destination file path, resolution, or color, if needed.
   **NOTE:** To change the file name or destination file path, click Change.

6. Click the **Start Scanning** button.
   The machine starts scanning. The scanned image will open in the application you have selected.

Save Scanned Data to a Folder as a PDF File Using ControlCenter (Macintosh)

1. Load your document.

2. In the Finder menu bar, click **Go > Applications > Dell Printers**, and then double-click the (ControlCenter) icon.
   The ControlCenter screen appears.

3. Click the **SCAN** tab.

4. Click the **File** button.
   The scan settings dialog box appears.

5. Click the **File Type** pop-up menu, and then select **PDF (*.pdf)**.
   **NOTE:** To save the document as a password-protected PDF, select **Secure PDF (*.pdf)** from the **File Type** pop-up menu, type your password in the **Password** and **Re-type Password** fields, and then click **OK**.

6. Change the scan settings, such as file format, file name, destination folder, resolution, or color, if needed.

7. Click the **Start Scanning** button.
The machine starts scanning. The file will be saved in the folder you selected.

**Scan Both Sides of an ID Card Using ControlCenter**

1. Place an ID card on the scanner glass.

2. In the **Finder** menu bar, click **Go > Applications > Dell Printers**, and then double-click the **ControlCenter** icon. The **ControlCenter** screen appears.

3. Click the **SCAN** tab.

4. Click the **File** button. The scan settings dialog box appears.

5. Select the **ID Card Scan** check box. The instruction dialog appears.

6. Read the instructions on the screen, and then press **OK**.

7. Configure other settings, if needed.

8. Click the **Start Scanning** button. The machine starts scanning one side of the identification card.

9. After the machine has scanned one side, turn over the identification card, and then click **Continue** to scan the other side.

10. Click **Finish**.
Scan to E-mail Attachment Using ControlCenter (Macintosh)

Send a scanned document as an email attachment.

• The Scan to E-mail feature does not support Webmail services. Use the Scan to Image or Scan to File feature to scan a document or a picture, and then attach the file of the scanned data to an email message.

**NOTE:** The machine scans to your default email client.

1. Load your document.

2. In the Finder menu bar, click Go > Applications > Dell Printers, and then double-click the **ControlCenter** icon.
   The **ControlCenter** screen appears.

3. Click the **SCAN** tab.

4. Click the **E-mail** button.
   The scan settings dialog box appears.

5. Change the scan settings, such as file format, file name, destination file path, resolution, or color, if needed.
   **NOTE:** To change the file name or destination file path, click **Change**.

6. Click the **Start Scanning** button.
   The machine starts scanning. Your default email application will open and the scanned image is attached to a new, blank email.
**Scan to an Editable Text File (OCR) Using ControlCenter (Macintosh)**

Your machine can convert characters in a scanned document to text data using optical character recognition (OCR) technology. Edit this text using your preferred text-editing application.

(Macintosh) OCR Software must be installed on your computer. Download OCR Software from Install OCR Software.

**NOTE:** The Scan to OCR feature is available for English, French, German, Dutch, Italian, Spanish, Brazilian Portuguese, Danish, Swedish, Japanese, Korean, Traditional Chinese and Simplified Chinese.

1. Load your document.

2. In the Finder menu bar, click Go > Applications > Dell Printers, and then double-click the (ControlCenter) icon.
   The ControlCenter screen appears.

3. Click the SCAN tab.

4. Click the OCR button.
   The scan settings dialog box appears.

5. Change the scan settings, such as file format, file name, destination file path, resolution, or color, if needed.
   **NOTE:** To change the file name or destination file path, click Change.

6. Click the Start Scanning button.
The machine scans the document, converts it to editable text, and then sends it to your default word processing application.

**Scan Using TWAIN-Compliant Applications (Macintosh)**

1. Launch your scanning application.
   The first time you use the Dell TWAIN driver, you must set it as the default driver.

2. Select the scan command in your application.
   The scanner setup dialog box appears.

3. Change the scan settings, such as **Resolution**, **Scan Type**, or **Adjust Image** options, if needed.

4. Click the **Document Size** pop-up menu, and then select your document size.
   **NOTE:** After you select a document size, adjust the scanning area by holding down the mouse button and dragging your mouse pointer over the portion you want to scan.

5. Click the **PreScan** option to preview your image and crop unwanted portions before scanning.

6. Click **Start**.
   The machine starts scanning.
TWAIN Driver Settings (Macintosh)

NOTE: Item names and assignable values will vary depending on the machine.

NOTE: The Brightness setting is available only when selecting Black & White, Gray (Error Diffusion), True Gray, or 24bit Color from the Scan Type options.

NOTE: The Contrast setting is available only when selecting Gray (Error Diffusion), True Gray, or 24bit Color from the Scan Type options.

Resolution
Select a scanning resolution from the Resolution pop-up menu. Higher resolutions take more memory and transfer time, but produce a finer scanned image.

Scan Type
Select from a range of scan color depths.

• Black & White
  Use for text or line art images.

• Gray (Error Diffusion)
  Use for photographic images or graphics. (Error Diffusion is a method for creating simulated gray images without using true gray dots. Black dots are put in a specific pattern to give a gray appearance.)

• True Gray
  Use for photographic images or graphics. This mode is more accurate because it uses up to 256 shades of gray.

• 256 Color
  Use for simple color illustrations that do not use the full color spectrum. This mode uses up to 256 colors to create images.

• 24bit Color
  Use to create an image with the most accurate color reproduction. This mode uses up to 16.8 million colors to scan the image, but it requires the most memory and has the longest transfer time.

Document Size
Select the exact size of your document from a selection of preset scan sizes.
- If you select **Custom**, you can specify the document size.

![Adjust Image](image)

**Adjust Image**
Click the **Adjust Image** button to adjust other image qualities.

**Brightness**
Set the **Brightness** level by dragging the slider to the right or left to lighten or darken the image. If the scanned image is too light, set a lower brightness level and scan the document again. If the image is too dark, set a higher brightness level and scan the document again.
You can also type a value in the box to set the brightness.

**Contrast**
Increase or decrease the **Contrast** level by moving the slider to the right or left. An increase emphasizes dark and light areas of the image, while a decrease reveals more details in gray areas. You can also type a value in the box to set the contrast.

**Reduce Noise**
Improve and enhance the quality of your scanned images with this selection. The **Reduce Noise** option is available when selecting the **24bit Color** option and the **300 x 300 dpi**, **400 x 400 dpi**, or **600 x 600 dpi** scan resolutions.
Scan Using Apple Image Capture (ICA Driver)
The Apple Image Capture application uses the ICA scanner driver.

1. Launch the **Image Capture** application.

2. Select the machine from the list on the left side of the screen.
   - If you connected the Dell machine to your Macintosh with a USB cable, you will see the machine in the **DEVICES** area. If connected via LAN, you will see it in the **SHARED** area.

3. Load your document.

4. Do one of the following:
   - *(For OS X v10.8.x, 10.9.x and 10.10.x)*
     - If you place the document in the ADF, select the **Use Document Feeder** check box and then select the size of your document from the scan size setting pop-up menu.
• (For OS X v10.8.x, 10.9.x and 10.10.x)
  If you place the document on the scanner glass, clear the Use Document Feeder check box.

**Show Details**
Change the scanning settings, if needed.
You can crop the image manually by dragging the mouse pointer over the portion you want to scan when scanning from the scanner glass.

5. Select the destination folder or destination application from the Scan To pop-up menu.
6. Click Scan.
   The machine starts scanning.

  - Use Memory Receive (Remote Fax) options to direct incoming faxes while you are away from the machine. You can use only one Memory Receive option at a time.
- Remote Retrieval
  - Use Remote Retrieval to call your machine from any touch-tone telephone or fax machine and use a remote access code and remote commands to retrieve fax messages.
- Receive Faxes into Memory When the Paper Tray is Empty

Receive Mode Settings

- Receive Modes
• Choose the Correct Receive Mode
  The correct Receive Mode for you is determined by the external devices and telephone subscriber services (Voice Mail, Distinctive Ring and so on) you will be using on the same line as the Dell machine.

• Set the Number of Rings Before the Machine Answers (Ring Delay)
  When somebody calls your machine, you will hear the normal telephone ring sound. The number of rings is set in the Ring Delay option.

• Set the F/T Ring Time (Pseudo/Double-ring)
  When you set the Receive Mode to Fax/Tel Mode, if the call is a fax, your machine will automatically receive it. However, if it is a voice call, the machine will sound the F/T ring (pseudo/double-ring) for the time you set in the F/T Ring Time option. When you hear the F/T ring, it means that a voice caller is on the line.

• Set the Easy Receive

Receive Modes

Related Models: Dell E515dn / Dell E515dw

Some receive modes answer automatically (Fax Only Mode and Fax/Tel Mode). You may want to change the Ring Delay before using these modes.

Fax Only Mode

(Fax or Fax only in the Machine's Menu)
Fax Only Mode automatically answers every call as a fax.

Fax/Tel Mode

(Fax/Tel in the Machine's Menu)
Fax/Tel Mode helps you manage incoming calls, by recognizing whether they are fax or voice calls and handling them in one of the following ways:
  • Faxes will be received automatically.
  • Voice calls will start the F/T ring to tell you to pick up the call. The F/T ring is a fast pseudo/double-ring made by your machine.

Manual Mode

(Manual in the Machine's Menu)
Manual Mode turns off all automatic answering operations unless you are using the Distinctive Ring Receive feature.

To receive a fax in Manual Mode, lift the handset of the external telephone or press Hook.
When you hear fax tones (short repeating beeps), press the buttons in the table to receive a fax. Use the Easy Receive feature to receive faxes when you have lifted a handset on the same line as the machine.

External TAD Mode

(External TAD in the Machine's Menu)

External TAD Mode lets an external answering device manage your incoming calls.
Incoming calls will be handled in the following ways:
  • Faxes will be received automatically.
  • Voice callers can record a message on the external TAD.
Choose the Correct Receive Mode

Related Models: Dell E515dn / Dell E515dw

The correct Receive Mode for you is determined by the external devices and telephone subscriber services (Voice Mail, Distinctive Ring and so on) you will be using on the same line as the Dell machine.

**Will you be using a Distinctive Ring number for receiving faxes?**

Dell uses the term "Distinctive Ring" but different telephone companies may have other names for this service such as Custom Ringing, RingMaster, Personalized Ring, Teen Ring, Ident-A-Ring, Ident-A-Call, Data Ident-A-Call, Smart Ring and SimpleBiz Fax & Alternate Number Ringing.

**Will you be using Voice Mail on the same telephone line as your Dell machine?**

If you have Voice Mail on the same telephone line as your Dell machine, there is a strong possibility that Voice Mail and the Dell machine will conflict with each other when receiving incoming calls.

**Will you be using a Telephone Answering Device on the same telephone line as your Dell machine?**

Your external telephone answering device (TAD) will answer every call automatically. Voice messages are stored on the external TAD and fax messages are printed. Select External TAD Mode as your receive mode.

**Will you be using your Dell machine on a dedicated fax line?**

Your machine automatically answers every call as a fax. Select Fax Only Mode as your receive mode.

**Will you be using your Dell machine on the same line as your telephone?**

- **Do you want to receive voice calls and faxes automatically?**
  The Fax/Tel Mode is used when sharing the Dell machine and your telephone on the same line. Select Fax/Tel Mode as your receive mode.
  
  **Important Note:** You cannot receive voice messages on either Voice Mail or an answering machine if you selected the Fax/Tel Mode.

- **Do you expect to receive very few faxes?**
  Choose Manual Mode as your receive mode. You control the telephone line and must answer every call yourself.

1. Press (Fax).
2. Press Menu.
3. Press ▲ or ▼ to display the Fax option, and then press OK.
4. Press ▲ or ▼ to display the Setup Receive option, and then press OK.
5. Press ▲ or ▼ to display the Receive Mode option, and then press OK.

  **NOTE:** If you cannot change the Receive Mode option, make sure the Distinctive Ring feature is set to Off.

6. Press ▲ or ▼ to select the Fax only, Fax/Tel, External TAD, or Manual option, and then press OK.
7. Press Cancel.

Set the Number of Rings Before the Machine Answers (Ring Delay)

Related Models: Dell E515dn / Dell E515dw

When somebody calls your machine, you will hear the normal telephone ring sound. The number of rings is set in the Ring Delay option.
• The Ring Delay setting sets the number of times the machine rings before it answers in the Fax Only Mode and the Fax/Tel Mode.
• If you have external or extension telephones on the same line as the machine, keep the Ring Delay setting of 4.

1. Press (Fax).
2. Press Menu.
3. Press ▲ or ▼ to display the Fax option, and then press OK.
4. Press ▲ or ▼ to display the Setup Receive option, and then press OK.
5. Press ▲ or ▼ to display the Ring Delay option, and then press OK.
6. Press ▲ or ▼ to select the number of rings you want the line to ring before the machine answers, and then press OK.
7. Press Cancel.

   NOTE: If you select 00, the machine will answer immediately and the line will not ring at all (available only for some countries).

Set the F/T Ring Time (Pseudo/Double-ring)

Related Models:Dell E515dn / Dell E515dw

When you set the Receive Mode to Fax/Tel Mode, if the call is a fax, your machine will automatically receive it. However, if it is a voice call, the machine will sound the F/T ring (pseudo/double-ring) for the time you set in the F/T Ring Time option. When you hear the F/T ring, it means that a voice caller is on the line.

The F/T Ring Time feature works when you set Fax/Tel Mode as the Receive Mode.

Because the F/T ring is made by the machine, extension and external telephones will not ring; however, you can still answer the call on any telephone.

1. Press (Fax).
2. Press Menu.
3. Press ▲ or ▼ to display the Fax option, and then press OK.
4. Press ▲ or ▼ to display the Setup Receive option, and then press OK.
5. Press ▲ or ▼ to display the F/T Ring Time option, and then press OK.
6. Press ▲ or ▼ to display how long the machine will ring to alert you that you have a voice call, and then press OK.
7. Press Cancel.

   NOTE: Even if the caller hangs up during the pseudo/double-ringing, the machine will continue to ring for the set time.

### Rollover Telephone Lines

Related Models:Dell E515dn / Dell E515dw

A rollover telephone system is a group of two or more separate telephone lines that pass incoming calls to each other if they are busy.

This feature is available only in the USA and Canada.

The calls are usually passed down or ‘rolled over’ to the next available telephone line in a preset order. Your machine can work in a rollover system only if it is the last number in the sequence, so the call cannot roll away. Do not place the machine on any of the other numbers; when the other lines are busy and a second fax call is received, the fax call would be transferred to a line that does not have a fax machine. Your machine will work best on a dedicated line.

### Two-Line Telephone System

Related Models:Dell E515dn / Dell E515dw

A two-line telephone system is nothing more than two separate telephone numbers on the same wall outlet.

This feature is available only in the USA and Canada.

The two telephone numbers can be on separate jacks (RJ11) or combined into one jack (RJ14). Your machine must be plugged into an RJ11 jack. RJ11 and RJ14 jacks may be equal in size and appearance and both may contain four wires (black, red, green, yellow). To test the type of jack, plug in a two-line telephone and see if it can access both lines. If it can, you must separate the line for your machine.
Convert Telephone Wall Outlets

Related Models:Dell E515dn / Dell E515dw
This feature is available only in the USA and Canada.
There are three ways to convert to an RJ11 jack. The first two ways may require assistance from the telephone company. You can change the wall outlets from one RJ14 jack to two RJ11 jacks. Or, you can have an RJ11 wall outlet installed and slave or jump one of the telephone numbers to it.
The third way is the easiest: Buy a triplex adapter. You can plug a triplex adapter into an RJ14 outlet. It separates the wires into two separate RJ11 jacks (Line 1, Line 2) and a third RJ14 jack (Lines 1 and 2). If your machine is on Line 1, plug the machine into L1 of the triplex adapter. If your machine is on Line 2, plug it into L2 of the triplex adapter.

Install Your Dell Machine, a External Two-Line TAD and Two-Line Telephone

Related Models:Dell E515dn / Dell E515dw
When you are installing an external two-line telephone answering device (TAD) and a two-line telephone, your machine must be isolated on one line at both the wall jack and at the TAD.

- This feature is available only in the USA and Canada.
- The most common connection is to place the machine on Line 2, which is explained in the following steps. The back of the two-line TAD must have two telephone jacks: one labeled L1 or L1/L2, and the other labeled L2. You will need at least three telephone line cords, the one that came with your machine and two for your external two-line TAD. You will need a fourth line cord if you add a two-line telephone.

1. Place the two-line TAD and the two-line telephone next to your machine.
2. Plug one end of the telephone line cord for your machine into the L2 jack of the triplex adapter. Plug the other end into the LINE jack of the machine.
3. Plug one end of the first telephone line cord for your TAD into the L1 jack of the triplex adapter. Plug the other end into the L1 or L1/L2 jack of the two-line TAD.
4. Plug one end of the second telephone line cord for your TAD into the L2 jack of the two-line TAD. Plug the other end into the EXT. jack of the machine.
a. Triplex Adapter
b. Two Line Telephone
c. External Two Line TAD
d. Machine

You can keep two-line telephones on other wall outlets as always. There are ways to add a two-line telephone to the machine's wall outlet. You can plug the telephone line cord from the two-line telephone into the L1+L2 jack of the triplex adapter. Or, you can plug the two-line telephone into the TEL jack of the two-line TAD.

Sometimes you may want to choose from several long-distance carriers when you send a fax. Rates may vary depending on the time and destination. To take advantage of low rates, you can store the access codes of long-distance carriers and credit card numbers as Address Book numbers.

You can store these long dialing sequences by dividing them and setting them up as separate Address Book numbers in any combination. You can even include manual dialing using the dial pad.

For example: You might have stored '555' and '7000' in your machine as shown in the following table.

<table>
<thead>
<tr>
<th>Applicable Models</th>
<th>'555' stored in</th>
<th>'7000' stored in</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dell E515dn/Dell E515dw</td>
<td>Quick Dial: 003</td>
<td>Quick Dial: 002</td>
</tr>
</tbody>
</table>

You can use them both to dial '555-7000' by following procedure.

1. Press (Fax).
2. Press ▲ twice, 003.
3. Press ▼ twice, 002 and Start.

The machine will dial '555-7000'.

To temporarily change a number, you can substitute part of the number by pressing it using the dial pad. For
example, to change the number to '555-7001', you could enter the number (555) using Quick Dial 003, and then press 7001 using the dial pad.

**NOTE:** If you must wait for another dial tone or signal at any point in the dialing sequence, create a pause in the number by pressing Redial/Pause.

Voice Mail

Related Models:Dell E515dn / Dell E515dw
This feature is available only in the USA and Canada.
If you have Voice Mail on the same telephone line as your Dell machine, Voice Mail and the Dell machine will
conflict with each other when receiving incoming calls.
For example, if your Voice Mail is set to answer after four rings and your Dell machine is set to answer after two
rings, then your Dell machine will answer first. This will prevent callers from being able to leave a message in your
Voice Mail.
Similarly, if your Dell machine is set to answer after four rings and your Voice Mail is set to answer after two rings, then your Voice Mail will answer first. This will prevent your Dell machine from being able to receive an incoming fax, since Voice Mail cannot transfer the incoming fax back to the Dell machine.

To avoid conflicts between your Dell machine and your Voice Mail service, do one of the following:

- Get the Distinctive Ring service from your telephone company. Distinctive Ring is a feature of your Dell machine that allows a person with one line to receive fax and voice calls through two different telephone numbers on that one line.

  Dell uses the term 'Distinctive Ring,' but telephone companies market the service under a variety of names, such as Custom Ringing, Personalized Ring, Smart Ring, RingMaster, Ident-A-Ring, Ident-A-Call, Data Ident-A-Call, Teen Ring, and SimpleBiz Fax & Alternate Number Ringing. This service establishes a second telephone number on the same line as your existing telephone number, and each number has its own ring pattern. Typically, the original number rings with the standard ring pattern and is used for receiving voice calls, and the second number rings with a different ring pattern and is used for receiving faxes.

- Set your Dell machine’s Receive Mode to "Manual". Manual Mode requires you answer every incoming call if you want to be able to receive a fax. If the incoming call is a telephone call, then complete the call as you normally would. If you hear fax sending tones you must transfer the call to the Dell machine.

Unanswered fax and voice calls will go to your Voice Mail.

**NOTE:** You must pay for your telephone company’s Distinctive Ring service before you program the machine to work with it.

**NOTE:** Contact your telephone company for availability and rates.

**What does your telephone company’s ‘Distinctive Ring’ do?**

Your telephone company’s Distinctive Ring service allows you to have more than one number on the same telephone line. **If you need more than one telephone number, it is cheaper than paying for an extra line.** Each telephone number has its own distinctive ring pattern, so you will know which telephone number is ringing. This is one way to have a separate telephone number for your machine.

**NOTE:** Contact your telephone company for availability and rates.

**What does Dell’s ‘Distinctive Ring’ do?**

The Dell machine has a Distinctive Ring feature that allows you to use your machine to take full advantage of the telephone company’s Distinctive Ring service. The new telephone number on your line can just receive faxes.

**NOTE:** You must pay for your telephone company’s Distinctive Ring service before you program the machine to work
Do you have Voice Mail?

If you have Voice Mail on the telephone line that you will install your new machine on, there is a strong possibility that Voice Mail and the machine will conflict with each other while receiving incoming calls. However, the Distinctive Ring feature allows you to use more than one number on your line, so both Voice Mail and the machine can work together without any problems. If each one has a separate telephone number, neither will interfere with the other's operations.

If you decide to get the Distinctive Ring service from the telephone company, you must register the new Distinctive Ring pattern they give you. This is so your machine can recognize its incoming calls.

**NOTE:** You can change or cancel the Distinctive Ring pattern at any time. You can switch it off temporarily, and turn it back on later. When you get a new fax number, make sure you reset this feature.

Before you choose the ring pattern to register

You can only register one Distinctive Ring pattern with the machine. Some ring patterns cannot be registered. The ring patterns below are supported by your Dell machine. Register the one your telephone company gives you.

</tr>
<tr>
<td>3</td>
<td>short-short-long</td>
</tr>
<tr>
<td>4</td>
<td>very long (normal pattern)</td>
</tr>
</tbody>
</table>

**NOTE:** Ring Pattern #1 is often called Short-Short and is the most commonly used.

**NOTE:** If the ring pattern you received is not on this chart, contact your telephone company and ask for one that is shown.

- The machine will only answer calls to its registered number.
- The first two rings are silent on the machine. This is because the fax must <<listen>> to the ring pattern (to compare it to the pattern that was ‘registered’). (Other telephones on the same line will ring.)
- If you program the machine correctly, it will recognize the registered ring pattern of the ‘fax number’ within two ring patterns and then answer with a fax tone. When the ‘voice number’ is called, the machine will not answer.

- The **# Unavailable** message means the call originated outside your Caller ID service area.
- The **Private Call** message means the caller has intentionally blocked transmission of Caller ID information. Call your telephone company for more information.

Once you answer a call, the Caller ID information disappears from the LCD and is stored in Caller ID memory. View the list or select a number and add it to the Address Book (the Speed Dial or One the Touch Dial in some models), or delete it from the history.

You can print a list of the Caller ID information received by your machine.

NOTE: The Caller ID service varies with different carriers. Contact your local telephone company to learn about the service available in your area.

External TAD (Telephone Answering Device)

Related Models: Dell E515dn / Dell E515dw
You can connect an external Telephone Answering Device (TAD) to the same line as your machine. When the TAD answers a call, your machine will “listen” for the CNG (fax calling) tones sent by a sending fax machine. If it hears them it will take over the call and receive the fax. If it does not hear them, it will let your TAD take a voice message and the display will show Telephone.

The external TAD must answer within four rings (we recommend setting it to two rings). This is because your machine cannot hear the CNG tones until the external TAD has picked up the call. The sending machine will send CNG tones for only eight to ten seconds longer. We do not recommend using the toll saver feature on your external TAD if it needs more than four rings to activate it.

Unless you are using Distinctive Ring, the TAD must be connected to the EXT. jack of the machine.

- **If you subscribe to your telephone company’s Distinctive Ring service:**
  You may connect an external TAD to a separate wall jack only if you subscribe to your telephone company’s Distinctive Ring service, have registered the distinctive ring pattern on your machine, and use that number as a fax number. The recommended setting is at least four rings on the external TAD when you have the telephone company’s Distinctive Ring service. You cannot use the Toll Saver setting.

- **If You Do Not Subscribe to the Distinctive Ring Service:**
  You must plug your TAD into the EXT. jack of your machine. If your TAD is plugged into a wall jack, both your machine and the TAD will try to control the telephone line. (See the illustration.)
**IMPORTANT**

DO NOT connect a TAD elsewhere on the same telephone line.

**NOTE:** If you have problems receiving faxes, reduce the Ring Delay setting on your external TAD.

**Connect an External TAD**

Related Models: Dell E515dn / Dell E515dw

The external TAD must be plugged into the back of the machine, into the jack labeled EXT. Your machine cannot work correctly if you plug the TAD into a wall jack (unless you are using Distinctive Ring).

1. Plug the telephone line cord from the telephone wall jack into the back of the machine, in the jack labeled LINE.
2. Plug the telephone line cord from your external TAD into the back of the machine, in the jack labeled EXT. (Make sure this cord is connected to the TAD at the TAD’s telephone line jack, and not its handset jack.)
3. Set your external TAD to four rings or less. (The machine’s Ring Delay setting does not apply.)
4. Record the outgoing message on your external TAD.
5. Set the TAD to answer calls.
6. Set the Receive Mode on your machine to External TAD.

**Record an Outgoing Message (OGM) on the External TAD**

Related Models: Dell E515dn / Dell E515dw

1. Record 5 seconds of silence at the beginning of your message. This allows your machine time to listen for fax tones.
2. Limit your speaking to 20 seconds.
3. End your 20-second message by giving your Fax Receive Code for people sending manual faxes. For example: “After the beep, leave a message or press *51 and Start to send a fax.”
   **NOTE:** We recommend beginning your OGM with an initial 5 second silence because the machine cannot hear fax tones over a loud voice. You may try leaving out this pause, but if your machine has trouble receiving faxes, then you should re-record the OGM to include it.

**Multi-line Connections (PBX)**

Related Models: Dell E515dn / Dell E515dw

We suggest you ask the company who installed your PBX to connect your machine. If you have a multi line system we suggest you ask the installer to connect the unit to the last line on the system. This prevents the machine being activated each time the system receives telephone calls. If all incoming calls will be answered by a switchboard operator we recommend setting the Receive Mode to Manual.

We cannot guarantee that your machine will operate correctly under all circumstances when connected to a PBX. Any difficulties with sending or receiving faxes should be reported first to the company who handles your PBX.

**Operation from External and Extension Telephones**

Related Models: Dell E515dn / Dell E515dw

**Use extension telephones**
If you answer a fax call at an extension telephone, you can make your machine receive the fax by pressing the Fax Receive Code `*51`.
If the machine answers a voice call and pseudo/double-rings for you to take over, you can take the call at an extension telephone by pressing the Telephone Answer Code `#51`.

**Use an external telephone (Connected to the EXT. jack of the machine)**
If you answer a fax call at the external telephone connected to the EXT. jack of the machine, you can make the machine receive the fax by pressing **Start**, and selecting **2**.
If the machine answers a voice call and pseudo/double-rings for you to take over, you can take the call at the external telephone by pressing **Hook**.
If you answer a call and no one is on the line:
You should assume that you’re receiving a manual fax.
Press *51 and wait for the chirp or until the LCD displays Receiving, and then hang up.

NOTE: You can also use the Easy Receive feature to make your machine automatically take the call.

Use a Non-Dell Cordless External Handset

Related Models: Dell E515dn / Dell E515dw
If your non-Dell cordless telephone is connected to the EXT. jack of the machine and you typically carry the cordless handset elsewhere, it is easier to answer calls during the Ring Delay.
If you let the machine answer first, you must go to the machine so you can press Hook or Hook to transfer the call to the cordless handset.

Use the Remote Codes

Related Models: Dell E515dn / Dell E515dw
Fax Receive Code
If you answer a fax call on an extension telephone, you can tell your machine to receive it by pressing the Fax Receive Code *51. Wait for the chirping sounds then replace the handset.
If you answer a fax call at the external telephone, you can make the machine receive it by pressing the buttons in the following table.

**NOTE:** The Dell machine needs an appropriate IP address configuration.

**NOTE:** If you are using a router, the Gateway address must be configured on the computers and the Dell machine.

NOTE: In a larger network, we recommend a Network Shared Printing environment.

NOTE: The "Server" or the "Print Server" must use the TCP/IP protocol.

NOTE: The Dell machine needs to have an appropriate IP address configuration, unless it is connected via the USB interface at the server.

Wireless Network Connection Examples

Identify your wireless network connection type: Infrastructure mode, Ad-Hoc mode, or Wi-Fi Direct™ mode.

• Connected to a Computer with a Wireless LAN Access Point Router in the Network (Infrastructure Mode)
  This type of network has a wireless LAN central access point/router at the heart of the network. The access point can also act as a bridge or a gateway to a wired network. When the Dell wireless machine (your machine) is part of this network, it receives all print jobs via an access point.

• Connected to a Wireless Computer without a Wireless LAN Access Point Router in the Network (Ad-Hoc Mode)
  This type of network does not have a central wireless LAN access point/router. Each wireless client communicates directly with each other. When the Dell wireless machine (your machine) is part of this network, it receives all print jobs directly from the computer sending print data.

• Wi-Fi Direct

**Learn to Use Network Management Utilities**

Configure and change your Dell machine's network settings using a management utility.

- Web Based Management

**Learn about Network Management Utilities**

- What is Web Based Management?

**What is Web Based Management?**

Web Based Management is a utility that uses a standard web browser to manage your machine using the Hyper Text Transfer Protocol (HTTP). Type your machine's IP address into your web browser to access and change your print server settings.

**NOTE:** We recommend Microsoft® Internet Explorer® 8.0/9.0/10.0 for Windows® and Safari 5.0/6.0 for Macintosh. Make sure that JavaScript and Cookies are always enabled in whichever browser you use. If a different web browser is used, make sure it is compatible with HTTP 1.0 and HTTP 1.1.

**NOTE:** You must use the TCP/IP protocol on your network and have a valid IP address programmed into the print server and your computer.

**Access Network Management Software and Utilities**

Before using your Dell machine in a network environment, you must install the Dell software and configure the appropriate TCP/IP network settings on the machine itself.

If you do not want to or are unable to use the Dell installer, see *Related Information*.

**Access Web Based Management**

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example: http://192.168.1.2
   **NOTE:** If you are using a Domain Name System or enable a NetBIOS name, you can type another name, such as "SharedPrinter" instead of the IP address.
   • For example:
     http://SharedPrinter
   If you enable a NetBIOS name, you can also use the node name.
   • For example:
     http://DELL000499
   The NetBIOS name can be found in the Network Configuration Report.
   **NOTE:** For Macintosh, access Web Based Management by clicking the machine’s icon on the **Status Monitor** screen.

3. No password is required by default. Type a password if you have set one, and then click Submit.
   You can now change the print server settings.
   If you have changed the protocol settings, you must restart the machine after clicking Submit to activate the configuration.

---

### Set a Logon Password for Web Based Management

We recommend setting a logon password to prevent unauthorized access to Web Based Management.

1. Start your web browser.

2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example: http://192.168.1.2
   **NOTE:** If you are using a Domain Name System or enable a NetBIOS name, you can type another name, such as "SharedPrinter" instead of the IP address.
   • For example:
     http://SharedPrinter
   If you enable a NetBIOS name, you can also use the node name.
   • For example:
     http://DELL000499
   The NetBIOS name can be found in the Network Configuration Report.
   **NOTE:** For Macintosh, access Web Based Management by clicking the machine’s icon on the **Status Monitor** screen.

3. No password is required by default. Type a password if you have set one, and then click Submit.

4. Click Administrator.

5. Type the password you want to use (up to 32 characters).

6. Retype the password in the **Confirm New Password** box.
7. Click Submit.
In the future, every time you access Web Based Management, type the password in the Login box, and then click 

After configuring the settings, log off by clicking .

NOTE: If you are not setting a logon password, you can also set a password by clicking the Please configure the password button on the machine's web page.

Locate the Machine’s Network Settings

You can change your machine’s network settings (IP address, subnet mask, gateway and others) using the control panel or Web Based Management.

Additional Methods of Configuring Your Dell Machine for a Wireless Network

To connect your machine to your wireless network, we recommend using the Installer CD-ROM.

• Before Configuring Your Dell Machine for a Wireless Network
• Configure Your Machine for a Wireless Network Using the One Push Method of Wi-Fi Protected Setup™ (WPS) or AOSS™
• Configure Your Machine for a Wireless Network Using the PIN Method of Wi-Fi Protected Setup™ (WPS)
  If your wireless LAN access point/router supports WPS, you can use the Personal Identification Number (PIN) Method to configure your wireless network settings.
• Configure Your Machine for a Wireless Network in Ad-Hoc Mode (For IEEE 802.11b/g/n)
• Configure Your Machine for a Wireless Network Using the Machine's Control Panel Setup Wizard
• Configure Your Machine for a Wireless Network When the SSID Is Not Broadcast
• Use Wi-Fi Direct™

Before Configuring Your Dell Machine for a Wireless Network

Related Models:Dell E514dw / Dell E515dw

Before attempting to configure a wireless network, confirm the following:

• To achieve optimum results with normal everyday document printing, place the Dell machine as close to the wireless LAN access point/router as possible with minimal obstructions. Large objects and walls between the two devices and interference from other electronic devices can affect the data transfer speed of your documents.
  Due to these factors, wireless may not be the best method of connection for all types of documents and applications. If you are printing large files, such as multi-page documents with mixed text and large graphics, you may want to consider selecting wired Ethernet for faster data transfer, or USB for the fastest throughput speed.
• Although the Dell machine can be used in both a wired and wireless network, only one connection method can be used at a time. However, a wireless network connection and Wi-Fi Direct connection, or a wired network connection (supported models only) and Wi-Fi Direct connection can be used at the same time.
• Before configuring wireless settings, you must know your Network name (SSID) and Network Key.

If your wireless LAN access point/router supports WPS, you can use the Personal Identification Number (PIN) Method to configure your wireless network settings.

The PIN Method is one of the connection methods developed by the Wi-Fi Alliance®. By submitting a PIN created by an Enrollee (your machine) to the Registrar (a device that manages the wireless LAN), you can set up the wireless network and security settings. For more information on how to access WPS mode, see the instructions provided with your wireless access point/router.

5. When WLAN Enable ? appears, enable the wireless network.
   This will start the wireless setup wizard.
6. The LCD displays an eight-digit PIN and the machine starts searching for a wireless LAN access point/router.
7. Using a computer that is on the network, type “http://access point’s IP address” in your browser (where “access point’s IP address” is the IP address of the device that is used as the Registrar).
8. Go to the WPS setting page and type the PIN, and then follow the on-screen instructions.
The Registrar is usually the wireless LAN access point/router.

The setting page will differ depending on the brand of wireless LAN access point/router. For more information, see the instructions supplied with your wireless LAN access point/router.

If you are using a Windows Vista®, Windows® 7, or Windows® 8 computer as a Registrar, complete the following steps:

9. Do one of the following:
   • (Windows Vista®)
     Click (Start) > Network > Add a wireless device.
   • (Windows® 7)
     Click (Start) > Devices and Printers > Add a device.
   • (Windows® 8)
     Move your mouse to the lower right corner of your desktop. When the menu bar appears, click Settings > Control Panel > Hardware and Sound > Devices and Printers > Add a device.

   NOTE: To use a Windows Vista®, Windows® 7, or Windows® 8 computer as a Registrar, you must register it to your network in advance. For more information, see the instructions supplied with your wireless LAN access point/router.

   NOTE: If you use Windows® 7 or Windows® 8 as a Registrar, you can install the printer driver after the wireless configuration by following the on-screen instructions. To install the full driver and software package, use the Dell installer on the Installer CD-ROM.

10. Select your machine and click Next.
11. Type the PIN displayed on the machine's LCD, and then click Next.
12. Select your network, and then click Next.
13. Click Close.

   If your wireless device is connected successfully, the machine's LCD displays Connected. The machine will print your machine's wireless status report. If the connection fails, check the error code on the printed report.

Wi-Fi Direct is one of the wireless configuration methods developed by the Wi-Fi Alliance®. It allows you to configure a secured wireless network between your Dell machine and a mobile device, such as an Android™ device, Windows® Phone device, iPhone, iPod touch, or iPad, without using an access point. Wi-Fi Direct supports wireless network configuration using the one-push or PIN Method of Wi-Fi Protected Setup™ (WPS). You can also configure a wireless network by manually setting an SSID and password. Your Dell machine's Wi-Fi Direct feature supports WPA2™ security with AES encryption.

**Fax Using the Internet (I-Fax)**

Related Models: Dell E515dn / Dell E515dw

With Dell's I-Fax program, you can send and receive fax documents using the Internet as the transport mechanism. Documents are transmitted in email messages as attached TIFF-F files. Your computer can send and receive documents as long as it has an application that can generate and view TIFF-F files. You can use any TIFF-F viewer application. Documents sent via the machine will be converted into a TIFF-F format automatically. If you want to send and receive messages to and from your machine, your computer's email application must support Multipurpose Internet Mail Extensions (MIME).

**Important Information about I-Fax**

Related Models: Dell E515dn / Dell E515dw

I-Fax communication on a LAN is very similar to communication via email; however, it is different from fax communication using standard phone lines. The following is important information for using I-Fax:

- Factors such as the receiver's location, structure of the LAN and how busy the circuit (such as the Internet) is
may cause the system to take a longer time than usual to send an error mail.
• When sending confidential documents, we recommend using standard phone lines instead of the Internet (due to its low level of security).
• If the receiver's mail system is not MIME-compatible, you cannot use I-Fax to send documents. If possible, find out in advance, and note that some servers will not send an error reply.
• If a document is too large to send via I-Fax, it may not reach the receiver.
• You cannot change the font or size of the text in any Internet mail you receive.

Send an I-Fax

Related Models:Dell E515dn / Dell E515dw

Sending an I-Fax is like sending a normal fax. Make sure that your recipient's information is saved in your email address book, and load the document you want to I-Fax into your Dell machine.

NOTE: If the computer to which you want to send a document is not running Windows Server® 2003/2008/2012/2012 R2, Windows Vista®, Windows® 7, or Windows® 8, ask the computer’s owner to install software that can view TIFF-F files.

NOTE: To send multiple pages, use the ADF.
1. Press (Fax).

2. Load your document.

3. To change the fax-sending settings, Press ▲ or ▼ to display the Setup Send option, and then press OK. When you have finished changing settings, press OK.

4. Select a Speed Dial or One Touch number.

5. Press Start.

   The machine starts scanning. After the document is scanned, it is transmitted to the recipient via your SMTP server. You can cancel the send operation by pressing Cancel during scanning. When the transmission is finished, the machine will enter standby mode.

How Your Dell Machine Receives an Email or I-Fax

Related Models:Dell E515dn / Dell E515dw

When your Dell machine receives an incoming I-Fax, it will print the I-Fax automatically. To receive an I-Fax, we recommend using the control panel or Web Based Management to configure the following optional items:

- Auto Polling
- Polling Frequency
- Print Mail Header
- Delete/Read Receive Error Mail
- Send Delivery Notification (Receive)

There are two ways you can receive email messages:

- POP3/IMAP4 receiving at regular intervals
- POP3/IMAP4 receiving, manually initiated

When using POP3/IMAP4 receiving, the machine polls your email server to receive data. Polling can occur at set intervals (for example, you can configure the machine to poll the email server every ten minutes) or you can manually poll the server.
NOTE: If your machine starts to receive email data, the LCD displays Receiving. The email will print automatically.

NOTE: If your machine is out of paper when receiving data, the received data will be held in the machine’s memory. This data will be printed automatically after paper is reloaded in the paper tray.

NOTE: When the machine’s Temporary Fax Backup Function is turned on, received data will be stored for a certain period of time.

NOTE: If the received mail is not in a plain text format, or an attached file is not in the TIFF-F format, the error message “ATTACHED FILE FORMAT NOT SUPPORTED” will be printed.

NOTE: If the received mail is too large, the error message “E-MAIL FILE TOO LARGE” will be printed.

NOTE: If Delete/Read Receive Error Mail is On (default), then the error mail will be deleted from the email server automatically.

Relay Broadcast

Related Models:Dell E515dn / Dell E515dw

A Relay Broadcast is when your Dell machine receives a message over the Internet and then relays it to another fax machine using conventional telephone lines. If you must fax a document over a long distance or abroad, use the "relay broadcast" function to save the communication fee.

1. The Internet
2. Telephone line
3. Email server

Use the Dell machine's control panel or Web Based Management to configure the following items:

- **Relay Broadcast Function**
  - Set the Relay Broadcast Function to On.

- **Relay Domain**
  - Configure your machine's domain name on the machine that will broadcast the document to the conventional fax machine. If you wish to use your machine as a relay broadcast device, you must specify the trusted domain name (the portion of the name after the "@" sign) at the machine. Use care in selecting a trusted domain: any user on a trusted domain will be able to send a relay broadcast. You can register up to ten domain names.

- **Relay Broadcast Report**
  - Specify whether or not you want a report to print after the machine completes the relay broadcast.

Some email applications do not support sending an email to multiple fax numbers. If your email application cannot support multiple fax numbers, you can relay to only one fax machine at a time.

1. The Internet
If you are sending an email to a conventional fax machine, the method of entering the fax machine's fax number will vary, depending on the mail application you are using.

1. In your email application, create a new mail message and type the email address of the relay machine and fax number of the first fax machine in the "TO" box.
   The following is an example of how to enter the email address and fax number:

   **UKFAX@dell.co.uk(fax#123456789)**

   E-mail address

   Fax Phone Number

   The word "fax#" must be included with the phone number inside the parenthesis.

   **NOTE:** For Microsoft® Outlook®, the address information must be entered into the address book as follows:
   - Name: fax#123456789
   - Email address: UKFAX@dell.co.uk

2. Type the email address of the relay machine and fax number of the second fax machine in the "TO" box.
3. Send the email.

If there is an error while receiving an I-Fax, an error message will be printed, for example, “The message being sent to the machine was not in a TIFF-F format.”

To receive the error mail and have it print on your machine, in Setup Mail RX, switch the Header option to All or to Subject+From+To.

**Use the Send Fax to Server Feature**

Related Models:Dell E515dn / Dell E515dw

The Fax to Server feature allows the machine to scan a document and send it over the network to a separate fax server. The document will then be sent from the server as fax data to the destination fax number over standard phone lines. When the Fax to Server feature is set to On, all automatic fax transmissions from the machine will be sent to the fax server for fax transmission.

You can send a fax directly from the machine using the manual fax feature when the Send to Server feature is on.

**Before Sending a Fax to the Fax Server**

Related Models:Dell E515dn / Dell E515dw

To send a document to the fax server, the correct syntax for that server must be used. The destination fax number must be sent with a prefix and a suffix that match the parameters used by the fax server. In most cases, the syntax for the prefix is “fax=” and the syntax for the suffix would be the domain name of the fax server email gateway. The suffix must also include the “@” symbol at the beginning of the suffix. The prefix and the suffix information must be stored in the machine before you can use the Fax to server function. Destination fax numbers can be saved in the address book or entered using the dial pad (up to 40-digit numbers). For example: if you wanted to send a document to a destination fax number of 123-555-0001, use the following syntax:

```
Prefix
fax=123-555-0001@faxeserver.companyname.com
```

**NOTE:** Your fax server application must support an email gateway.

7. Next to the SNTP check box, click Advanced Setting and follow the instructions below:
Option | Description
--- | ---
Status | Displays whether the SNTP protocol is enabled or disabled.
SNTP Server Method | Select **AUTO** or **STATIC**.
  - **AUTO**
    If you have a DHCP server in your network, the SNTP server will obtain the address from that server automatically.
  - **STATIC**
    Type the address you want to use.
Primary SNTP Server Address | Type the server address (up to 64 characters).
Secondary SNTP Server Address | The secondary SNTP server address is used as a backup to the primary SNTP server address. If the primary server is unavailable, the machine will contact the secondary SNTP server.
Primary SNTP Server Port | Type the port number (1-65535).
Secondary SNTP Server Port | The secondary SNTP server port is used as a backup to the primary SNTP server port. If the primary port is unavailable, the machine will contact the secondary SNTP port.
Synchronization Interval | Type the number of hours between server synchronization attempts (1-168 hours).
Synchronization Status | Confirm the latest synchronization status.

8. Click **Submit**.

**Additional Network Settings for Windows®**

• Before Configuring Additional Network Settings
• Use Web Services to Install Drivers Used for Printing and Scanning (Windows Vista®, Windows® 7 and Windows® 8)
  Use Web Services to monitor printers on the network.
• Use Web Services to Uninstall Drivers Used for Printing and Scanning (Windows Vista®, Windows® 7 and Windows® 8)
• Use Vertical Pairing to Install Drivers Used for Printing and Scanning in Infrastructure Mode (Windows® 7 and Windows® 8)
  Windows® Vertical Pairing is a technology that allows your Vertical Pairing-supported wireless machine to connect to your Infrastructure network using the PIN Method of WPS and the Web Services feature. It enables printer driver and scanner driver installation from the multi-function printer icon in the Add a device screen. If you are in Infrastructure mode, you can connect your machine to the wireless network, and then install the printer driver and scanner driver using this feature.
• Use Vertical Pairing to Install Drivers Used for Printing from the Wi-Fi Direct Network (Windows® 8.1)
  Windows® 8.1 allows your Vertical Pairing-supported wireless machine to connect to the Wi-Fi Direct network using the one-push or PIN Method of WPS and the Web Services feature. It enables printer driver installation from the printer icon in the Add a device screen. You can connect your machine to the Wi-Fi Direct network, and then install the printer driver using this feature. Your machine also supports the Persistent Group feature of Vertical Pairing for Windows® 8.1.

**Before Configuring Additional Network Settings**

Use one of the following features to configure additional network settings:
• Web Services for printing and scanning (Windows Vista®, Windows® 7 and Windows® 8)
• Vertical Pairing (Windows® 7 and Windows® 8)

**Use Web Services to Install Drivers Used for Printing and Scanning (Windows Vista®, Windows® 7 and Windows® 8)**

Use Web Services to monitor printers on the network.

• Verify that the host computer and the Dell machine are on the same subnet, or that the router is correctly configured to pass data between the two devices.
• You must configure the IP address on your Dell machine before you configure this setting.
1. Insert the Installer CD-ROM.
2. Open Windows® Explorer, and navigate to your CD-ROM drive, and then select install > bin > ComDLL > Data.
4. If the User Account Control screen appears, do one of the following:
   - (Windows Vista®)
     Click Allow.
   - (Windows® 7/Windows® 8)
     Click Yes.
5. Do one of the following:
   - (Windows Vista®)
     Click (Start) > Network.
     The machine's Web Services Name appears with the printer icon.
     Right-click the machine you want to install.
   - (Windows® 7)
     Click (Start) > Control Panel > Network and Internet > View network computers and devices.
     The machine's Web Services Name appears with the printer icon.
     Right-click the machine you want to install.
   - (Windows® 8)
     Move your mouse to the lower right corner of your desktop. When the menu bar appears, click Settings > Change PC settings > Devices > Add a device.
     The machine's Web Services Name appears.
   - (Windows® 8.1)
     Move your mouse to the lower right corner of your desktop. When the menu bar appears, click Settings > Change PC settings > PC & devices > Devices > Add a device.
     The machine's Web Services Name appears.
   - (Windows® 8)
     Move your mouse over the machine name to display the machine's information.
6. Do one of the following:
   - (Windows Vista®/Windows® 7)
     Click Install in the machine's drop-down menu.
   - (Windows® 8)
     Select the machine you want to install.

**Use Web Services to Uninstall Drivers Used for Printing and Scanning (Windows Vista®, Windows® 7 and Windows® 8)**

1. Do one of the following:
• (Windows Vista®)

Click (Start) > Network.

• (Windows® 7)

Click (Start) > Control Panel > Network and Internet > View network computers and devices.

• (Windows® 8)

Move your mouse to the lower right corner of your desktop. When the menu bar appears, click Settings > Change PC settings > Devices.

• (Windows® 8.1)

Move your mouse to the lower right corner of your desktop. When the menu bar appears, click Settings > Change PC settings > PC & devices > Devices.

2. Do one of the following:

• (Windows Vista®/Windows® 7)

The machine's Web Services Name will be shown with the printer icon. Right-click the machine you want to uninstall.

• (Windows® 8)

The machine's Web Service Name will be shown. Select the machine you want to uninstall, and then click (Remove device).

3. Do one of the following:

• (Windows Vista®/Windows® 7)

Click Uninstall in the machine's drop-down menu.

• (Windows® 8)

When the dialog box appears, follow the on-screen instruction.

*1: Where "xxxxxx" is the first six digits of your machine's MAC Address (Ethernet Address).

Other Ways to Configure the IP Address

- Configure the IP Address Using DHCP
- Configure the IP Address Using BOOTP
- Configure the IP Address Using RARP
- Configure the IP Address Using APIPA
- Configure the IP Address Using ARP

Configure the IP Address Using DHCP

The Dynamic Host Configuration Protocol (DHCP) is one of several automated mechanisms for IP address allocation. If you have a DHCP server on your network, the print server obtains its IP address from the DHCP server automatically and registers its name with any RFC 1001- and 1002-compliant dynamic name services.

If you do not want your print server configured via DHCP, you must set the Boot Method to Static so that the print server has a static IP address. This will prevent the print server from trying to obtain an IP address from any of these systems.
To change the Boot Method, use the machine's control panel Network menu or Web Based Management.
Configure the IP Address Using BOOTP

Before you configure the IP address using Bootstrap Protocol (BOOTP), you must set the machine's Boot Method to BOOTP. To change the Boot Method, use the machine's control panel Network menu.

BOOTP is an alternative to Reverse Address Resolution Protocol (RARP) that has the advantage of allowing configuration of the subnet mask and gateway. To use BOOTP to configure the IP address, make sure BOOTP is installed and running on your host computer (it should appear in the /etc/services file on your host as a real service; type man bootpd or see your system documentation for information). BOOTP is usually started up via the /etc/inetd.conf file, so you may need to enable it by removing the "#" in front of the bootp entry in that file.

For example, a typical bootp entry in the /etc/inetd.conf file would be:

```
#bootp dgram udp wait /usr/etc/bootpd bootpd -i
```

Depending on the system, this entry might be called "bootps" instead of "bootp".

**NOTE:** To enable BOOTP, use an editor to delete the "#" (if there is no "#," then BOOTP is already enabled). Then edit the BOOTP configuration file (usually /etc/bootptab) and enter the name, network type (1 for Ethernet), MAC Address (Ethernet Address) and the IP address, subnet mask and gateway of the print server. Unfortunately, the exact format for doing this is not standardized, so you will need to see your system documentation to determine how to enter this information (many UNIX® systems also have template examples in the bootptab file that you can use for reference). Some examples of typical /etc/bootptab entries include:

```
DELL310107 1 00:80:77:31:01:07 192.168.1.2
```

and:

```
DELL310107:ht=ethernet:ha=008077310107:\ip=192.168.1.2:
```

Certain BOOTP host software implementations will not respond to BOOTP requests if you have not included a download filename in the configuration file. If this is the case, create a null file on the host and specify the name of this file and its path in the configuration file.

As with RARP, the print server will load its IP address from the BOOTP server when the machine is powered on.

Configure the IP Address Using RARP

Before you configure the IP address using Reverse Address Resolution Protocol (RARP), you must set the machine's Boot Method to RARP. To change the Boot Method, use the machine's control panel or Web Based Management.

The Dell print server's IP address can be configured using the RARP facility on your host computer. This is done by editing the /etc/ethers file (if this file does not exist, you can create it) with an entry similar to the following:

```
00:80:77:31:01:07 DELL008077310107
```

where the first entry is the MAC Address (Ethernet Address) of the print server and the second entry is the name of the print server. (The name must be the same as the one you put in the /etc/hosts file.)

If the RARP daemon is not already running, start it (depending on the system, the command can be rarpd, rarpd -a, in.rarpd -a, or another command; type man rarpd or see your system documentation for additional information).

To verify that the RARP daemon is running on a Berkeley UNIX® based system, type the following command:

```
ps -ax | grep -v grep | grep rarpd
```

For AT&T UNIX®-based systems, type:

```
ps -ef | grep -v grep | grep rarpd
```

The Dell print server will get the IP address from the RARP daemon when the machine is powered on.
Configure the IP Address Using APIPA

The Dell print server supports the Automatic Private IP Addressing (APIPA) protocol. With APIPA, DHCP clients automatically configure an IP address and subnet mask when a DHCP server is not available. The device selects its own IP address in the range 169.254.1.0 through 169.254.254.255. The subnet mask is automatically set to 255.255.0.0 and the gateway address is set to 0.0.0.0.

By default, the APIPA protocol is enabled. To disable the APIPA protocol, use the machine's control panel or Web Based Management.

Configure the IP Address Using ARP

If your network does not use a DHCP server, you can also use the Address Resolution Protocol (ARP) command. The ARP command is available on Windows® systems that have TCP/IP installed and UNIX® systems. To use ARP, type the following command:

```
arp -s ipaddress ethernetaddress
```

Where `ethernetaddress` is the MAC Address (Ethernet Address) of the print server and `ipaddress` is the IP address of the print server.

For example:

**Windows® systems**

Windows® systems require the hyphen (dash) "-" character between each digit of the MAC Address (Ethernet Address).

```
arp -s 192.168.1.2 00-80-77-31-01-07
ping 192.168.1.2
```

**UNIX®/Linux systems**

Typically, UNIX® and Linux systems require the colon ":" character between each digit of the MAC Address (Ethernet Address).

```
arp -s 192.168.1.2 00:80:77:31:01:07
ping 192.168.1.2
```

**NOTE:** You must be on the same Ethernet segment to use the ARP command, that is, there cannot be a router between the print server and operating system.

If there is a router, you may use BOOTP or other methods to enter the IP address. If your administrator has configured the system to deliver IP addresses using BOOTP, DHCP, or RARP, your Dell print server can receive an IP address from any one of these IP address allocation systems, so you will not need to use the ARP command. The ARP command works only once. For security reasons, when you have successfully configured the IP address of a Dell print server using the ARP command, you cannot use the ARP command again to change the address. The print server will ignore any attempts to do this. To change the IP address again, use Web Based Management, or perform a factory reset on the print server, which will then allow you to use the ARP command again.

Reset the Network Settings to the Factory Settings

You can use your machine’s control panel to reset the print server to its default factory settings. This resets all information, such as the password and IP address.
NOTE: This feature restores all wired and wireless network settings to the factory settings.

NOTE: You can also reset the print server to its factory settings using Web Based Management.

1. Press Menu.
2. Press ▲ or ▼ to display the Network option, and then press OK.
3. Press ▲ or ▼ to display the Network Reset option, and then press OK.
4. Follow the machine's instruction to reset the network settings.
   The machine will restart.

Network Menu on the Dell Control Panel
The control panel’s Network menu selections allow you to configure the Dell machine for your network.
Note that your Dell machine includes the Web Based Management, which you can use to configure many aspects of the network.

TCP/IP
If you connect the machine to your network with a network cable, use the Wired LAN menu selections. If you connect the machine to a wireless Ethernet network, use the WLAN menu selections.
**Boot Method**

This selection controls how the machine obtains an IP address.

- **Auto**
  
  In this mode, the machine will scan the network for a DHCP server. If it can find one, and if the DHCP server is configured to allocate an IP address to the machine, then the IP address supplied by the DHCP server will be used.

  If no DHCP server is available, the IP Address is set using the APIPA protocol. After the machine is initially powered ON, it may take a few minutes for the machine to scan the network for a server.

- **Static**
  
  In this mode, the machine's IP address must be manually assigned. When the IP address is entered, it is locked to the assigned address.

  If you do not want your print server configured via DHCP, BOOTP, or RARP, you must set the BOOT Method to Static so that the print server has a static IP address. This will prevent the print server from trying to obtain an IP address from any of these systems.

To change the BOOT Method, use the machine’s control panel or Web Based Management.

**IP Address**

This field displays the current IP address of the machine. If you have selected a BOOT Method of Static, type the IP address that you wish to assign to the machine (check with your network administrator for the IP address to use). If you have selected a method other than Static, the machine will attempt to determine its IP address using the DHCP, BOOTP, or RARP protocols.

The default IP address of your machine will probably be incompatible with the IP address numbering scheme of your network. We recommend contacting your network administrator for an IP address that is compatible with the network to which your machine is connected.

**Subnet Mask**

This field displays the current subnet mask used by the machine. If you are not using DHCP, BOOTP, or RARP to obtain the subnet mask, type the desired subnet mask. Check with your network administrator for the subnet mask to use.

**Gateway**

This field displays the current gateway or router address used by the machine. If you are not using DHCP, BOOTP, or RARP to obtain the gateway or router address, type the address you wish to assign. If you do not have a gateway or router, leave this field blank. Check with your network administrator if you are unsure.

**Node Name**

You can register the machine name on the Network. This name is often referred to as a NetBIOS name; it will be the name that is registered by the Windows® Internet Name Service (WINS) server on your network.

Dell recommends the name "DELLxxxxxx" (where "xxxxxx" is the first six digits of your machine’s MAC Address / Ethernet address) (up to 32 characters).

**WINS Configuration**

This selection controls how the machine obtains the IP address of the WINS server.

- **Auto**
  
  Automatically uses a DHCP request to determine the IP addresses for the primary and secondary WINS servers.

  You must set the **Boot Method** to **Auto** or **DHCP** for this feature to work.

- **Static**
Uses a specified IP address for the primary and secondary WINS servers.

**WINS Server**
This selection manages the IP address of the WINS server.

- **Primary (Primary WINS Server IP Address)**
  This field specifies the IP address of the primary WINS server. If set to a non-zero value, the machine will contact this server to register its name with the Windows® Internet Name Service.

- **Secondary (Secondary WINS Server IP Address)**
  This field specifies the IP address of the secondary WINS server. It is used as a backup to the primary WINS server address. If the primary WINS server is unavailable, the machine still can register itself with a secondary server.
  If set to a non-zero value, the machine will contact this server to register its name with the Windows® Internet Name Service. If you have a primary WINS server but no secondary WINS server, simply leave this field blank.

**DNS Server**
This selection manages the IP address of the Domain Name System (DNS) server.

- **Primary (Primary DNS Server IP Address)**
  This field specifies the IP address of the primary DNS server.

- **Secondary (Secondary DNS Server IP Address)**
  This field specifies the IP address of the secondary DNS server. It is used as a backup to the primary DNS server address. If the primary DNS server is unavailable, the machine will contact the secondary DNS server.

**APIPA**
Selecting On will cause the print server to automatically allocate a link-local IP address in the range (169.254.1.0 - 169.254.254.255) when the print server cannot obtain an IP address through the Boot Method you have set. Selecting Off means the IP address does not change when the print server cannot obtain an IP address through the Boot Method you have set.

**IPv6**
This machine is compatible with IPv6, the next generation Internet protocol. The default setting is Off. If you want to use the IPv6 protocol, select On.

**NOTE:** If you set IPv6 to On, turn off the power switch, and then turn it back on to enable this protocol.

**NOTE:** After you set IPv6 to On, this setting will be applied to both the wired and wireless LAN interface.

**Ethernet (Wired Network Only)**
Ethernet link mode allows the print server to operate in 100BASE-TX full or half duplex or in 10BASE-T full or half duplex mode by auto-negotiation.

**NOTE:** If you set this value incorrectly, you may not be able to communicate with your print server.

**Wired Status**
This field displays the current wired network status.
**MAC Address**

The MAC Address (Ethernet Address) is a unique number assigned for the machine’s network interface. You can check your machine’s MAC Address on its control panel.

**Auto Polling**
When set to On, the machine automatically checks the POP3/IMAP4 server for new messages.

**Poll Frequency**
Sets the interval for checking for new messages on the POP3/IMAP4 server (the default interval is 10 minutes).

**Header**
Allows the contents of the mail header to be printed when the received message is printed.

**Del/Read Error Mail**
When set to On, the machine automatically deletes error mails that the machine cannot receive from the mail
server.

**Notification**
Allows a "confirmation of receipt" message to be transmitted to the sending station when the I-Fax has been
received. This feature works only on I-Fax machines that support the Message Disposition Notification (MDN)
specification.

**Setup Mail TX**
Related Models:Dell E515dn / Dell E515dw

**Sender Subject**
This field displays the subject attached to the I-Fax data being sent from the Dell machine to a computer.

**Size Limit**
Some email servers do not allow you to send large email documents. (The system administrator will often place a limit on the maximum email size.) With this feature enabled, the machine will display Out of Memory when trying to send email documents over 1 MB in size. The document will not be sent and an error report will be printed. The document you are sending should be separated into smaller documents that will be accepted by the mail server (based on the ITU-T Test Chart #1 test chart, a 42 page document is approximately 1 MB in size).

**Notification**
The notification feature allows a "confirmation of receipt" message to be transmitted to the sending station when the I-Fax has been received. This feature works only on I-Fax machines that support the Message Disposition Notification (MDN) specification.

**Setup Relay**
Related Models:Dell E515dn / Dell E515dw
**Relay Broadcast**
Allows the machine to receive a document over the Internet and then relay it to other fax machines through conventional analog landlines.

**Relay Domain**
Register up to ten Domain Names that are allowed to request a Relay Broadcast.

**Relay Report**
A Relay Broadcast Report is a list of any relayed broadcasts that have been sent through the machine. It can be printed at the machine that will act as a Relay Station for all Relay Broadcasts. To use this function, you must assign the relay domain in the "Trusted Domains" section of the Relay function settings.

**Scan to E-mail**
Select Scan to E-mail to change the resolution and file type for an email attachment. You can scan and send a black and white or color document from the computer as an attachment.

**Scan to FTP**
Related Models:Dell E515dn / Dell E515dw
Select Scan to FTP to change the resolution and file type for the attachment. You can scan and send a black and white or color document directly to an FTP server on your local network or on the Internet.

**Fax to Server**
Related Models:Dell E515dn / Dell E515dw
You can set Fax to Server to On or Off, and store the prefix/suffix address for the fax server in the machine. As this section requires you to enter a lot of text characters, you may find that it is more convenient to use Web Based Management and your favorite web browser to configure these settings.

**Network Reset**
Select the Network Reset option to reset the print server to its default factory settings.

**Before Using Network Security Features**

Your Dell machine employs some of the latest network security and encryption protocols available today. These network features can be integrated into your overall network security plan to help protect your data and prevent unauthorized access to the machine.

**NOTE:** We recommend disabling the FTP and TFTP protocols. Accessing the machine using these protocols is not secure. However, note that if you disable FTP, the Scan to FTP feature will be disabled.
Supported Security Protocols and Features

- Security Protocols
- Security Methods for Sending and Receiving Email
- Manage Your Network Machine Securely Using Web Based Management (Web Browser)

To manage your network machine securely, you must use the management utilities with security protocols.

Security Protocols

SNMPv3
The Simple Network Management Protocol version 3 (SNMPv3) provides user authentication and data encryption to manage network devices securely.

Security Methods for Sending and Receiving Email

NOTE: Configure the settings for these security methods using Web Based Management.

SMTP Authentication (SMTP-AUTH)
SMTP-AUTH expands SMTP (the Internet email sending protocol) to include an authentication method that ensures that the true identity of the sender is known.

Authenticated Post Office Protocol (APOP)
APOP expands POP3 (the Internet receiving protocol) to include an authentication method that encrypts the password when the client receives email.

IMAP4 over SSL
IMAP4 over SSL enables receiving encrypted email using SSL.

Manage Your Network Machine Securely Using Web Based Management (Web Browser)

To manage your network machine securely, you must use the management utilities with security protocols.

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
3. No password is required by default. Type a password if you have set one, and then click.

   NOTE: If you use the SNMPv3 protocol, follow the steps below.

4. Click the Network tab.
5. Click Protocol.
6. Make sure the SNMP setting is enabled, and then click Advanced Setting of SNMP.
7. You can configure the SNMP settings.
   We have three selections for SNMP Mode of Operation.
   - SNMP v1/v2c read-write access
     In this mode, the print server uses version 1 and version 2c of the SNMP protocol. You can use all Dell applications under this mode. However, it is not secure since it will not authenticate the user and the data will
not be encrypted.

• **SNMPv3 read-write access and v1/v2c read-only access**

In this mode, the print server uses the read-write access of version 3 and the read-only access of version 1 and version 2c of the SNMP protocol.

**NOTE:** When you use the **SNMPv3 read-write access and v1/v2c read-only access** mode, some Dell applications that access to the print server do not work correctly since they authorize the read-only access of version 1 and version 2c. If you want to use all applications, use the **SNMP v1/v2c read-write access** mode.

• **SNMPv3 read-write access**

With this mode, the print server uses version 3 of the SNMP protocol. If you want to manage the print server securely, use this mode.

**NOTE:** When you use the **SNMPv3 read-write access** mode, note the following:

• You can manage the print server using Web Based Management only.
• All applications that use SNMPv1/v2c will be restricted. To allow the use of SNMPv1/v2c applications, use **SNMPv3 read-write access and v1/v2c read-only access** or **SNMP v1/v2c read-write access** mode.

### Configure Email Sending or Receiving Using Web Based Management

Related Models: Dell E515dn / Dell E515dw

We recommend using Web Based Management to configure secured email sending with user authentication.

1. Start your web browser.
2. Type "http://machine's IP address" in your browser's address bar (where "machine's IP address" is the machine's IP address).
   For example: http://192.168.1.2

   **NOTE:** If you are using a Domain Name System or enable a NetBIOS name, you can type another name, such as "SharedPrinter" instead of the IP address.

   • For example:
     http://SharedPrinter

   If you enable a NetBIOS name, you can also use the node name.

   • For example:
     http://DELL000499

   The NetBIOS name can be found in the Network Configuration Report.

   **NOTE:** For Macintosh, access Web Based Management by clicking the machine’s icon on the **Status Monitor**
3. No password is required by default. Type a password if you have set one, and then click.

4. Click the Network tab.

5. Click Protocol in the left navigation bar.

   - For more information, see the Help text in Web Based Management.
   - Confirm that the email settings are correct after configuration by sending a test email.
   - If you do not know the POP3/IMAP4/SMTP server settings, contact your network administrator or Internet Service Provider (ISP).

8. When finished, click Submit.

   The Test Send/Receive E-mail Configuration dialog box appears.

9. Follow the instructions in the dialog box to test the current settings.

Send an Email with User Authentication

Related Models: Dell E515dn / Dell E515dw

Your Dell machine supports the SMTP-AUTH method to send email via an email server that requires user authentication. This method prevents unauthorized users from accessing the email server.

You can use SMTP-AUTH for email notification, email reports and I-Fax.

**NOTE:** We recommend using Web Based Management to configure the SMTP authentication.

Email Server Settings

You must configure your machine's SMTP authentication method to match the method used by your email server. For details about your email server settings, contact your network administrator or Internet Service Provider (ISP).

**NOTE:** To enable SMTP server authentication: in the Web Based Management POP3/IMAP4/SMTP screen, under Server Authentication Method, you must select SMTP-AUTH.

Troubleshooting

Use this section to resolve typical problems you may encounter when using your Dell machine. You can correct most problems yourself.

**IMPORTANT**

For technical help, you must call the country where you bought the machine. Calls must be made from within that country.

Using non-Dell supplies may affect the print quality, hardware performance, and machine reliability.

(Dell E515dn/Dell E515dw)

To prevent you from losing the received fax data in the machine’s memory, transfer the data to another Fax machine or to your computer before turning off the machine.

First, check the following:

- The machine’s power cord is connected correctly and the machine’s power is on. See the *Setup Guide*.
- All of the protective materials have been removed. See the *Setup Guide*.
- Paper is loaded correctly in the paper tray.
- The interface cables are securely connected to the machine and the computer, or the wireless connection is set up on both the machine and your computer.
- Error and maintenance messages

If you did not solve the problem with the checks, identify the problem and then see *Related Information*.

</table>
The machine does not print on both sides of the paper even though the printer driver setting is 2-sided.

Check the paper size setting in the printer driver. You must select Letter, Legal or Folio paper that is 16 to 28 lb (60 to 105 g/m²).

Print speed is too slow.

Try changing the printer driver setting. The highest resolution needs longer data processing, sending and printing time.

The machine does not feed paper.

If there is paper in the paper tray, make sure it is straight. If the paper is curled, straighten it. Sometimes it is helpful to remove the paper, turn the stack over and put it back in the paper tray.

Reduce the amount of paper in the paper tray, and then try again.

Make sure Manual is not selected for Paper Source in the printer driver.

Clean the paper pick-up rollers.

The machine does not feed paper from the Manual feed slot.

Use both hands to push one sheet of paper firmly into the manual feed slot until the top edge of the paper presses against the paper feed rollers. Continue pressing the paper against the rollers until the machine grabs the paper and pulls it in further.

Put only one sheet of paper in the manual feed slot.

Make sure Manual is selected for Paper Source in the printer driver.

The machine does not feed envelopes.

Load one envelope at a time in the manual feed slot. Your application must be set to print the envelope size you are using. This is usually done in the Page Setup or Document Setup menu of your application.

Sending a Fax Call to the machine. If you answered on an extension telephone, press your Fax Receive Code (the factory setting is *51). If you answered on the external telephone (connected to the EXT. jack), press Start button to receive the fax. When your machine answers, hang up.

Custom features on a single line. If you have Call Waiting, Call Waiting/Caller ID, Caller ID, RingMaster, Voice Mail, an answering machine, an alarm system or other custom feature on a single telephone line with your machine, it may create a problem sending or receiving faxes.

For Example: If you subscribe to Call Waiting or some other custom service and its signal comes through the line while your machine is sending or receiving a fax, the signal can temporarily interrupt or disrupt the faxes. Dell’s ECM (Error Correction Mode) feature should help overcome this problem. This condition is related to the telephone system industry and is common to all devices that send and receive information on a single, shared line with custom features. If avoiding a slight interruption is crucial to your business, we recommend using a separate telephone line with no custom features.

<td>Cannot receive a fax.</td>
<td>Check all line cord connections. Make sure the telephone line cord is plugged into the telephone wall jack and the LINE jack of the machine. If you subscribe to DSL, VoIP or MagicJack services, call your service provider for connection instructions. To lower the modem speed and turn off ECM (error correction mode), change the telephone line interference / VoIP settings. Make sure your machine has a dial tone by pressing Hook key or Hook button in Fax mode. If you hear static or interference on your fax line, contact your local telephone provider. <td></td>
</tr>
<tr>
<td>• If you do not want your Dell machine to automatically answer any incoming faxes, you should select the Manual mode. <td></td>
</tr>
<tr>
<td>• If the Receive Mode is set to Manual, DO NOT adjust the Ring Delay setting.</td>
<td></td>
</tr>
</tbody>
</table>
Have someone send you a test fax:

- If you received the test fax successfully, your machine is operating correctly. Remember to reset your Ring Delay or answering machine setting back to your original setting. If receiving problems recur after resetting the Ring Delay, then a person, device, or subscriber service is answering the fax call before the machine has a chance to answer.
- If you were not able to receive the fax, then another device or subscriber service may be interfering with your fax reception or there may be a problem with your fax line.

If you are using a telephone answering machine (External TAD mode) on the same line as the Dell machine, make sure your answering machine is set up correctly.

1. Plug the telephone line cord directly from the wall telephone jack to your Dell machine’s LINE jack.
2. Remove the protective cap from your Dell machine’s EXT jack, and then plug the telephone line cord from your answering machine into the EXT jack.
3. Set your answering machine to answer within 4 rings.
   - If you are having problems receiving faxes or voice messages, set your answering machine to answer within 2 or 3 rings.
4. Record the outgoing message on your answering machine.
   - Record five seconds of silence at the beginning of your outgoing message.
   - Limit your speaking to 20 seconds.
   - End your outgoing message with your Fax Receive Code for people sending manual faxes. For example: “After the beep, leave a message or press *51 and Start to send a fax.”
5. Set your answering machine to answer calls.
6. Set your Dell machine’s Receive Mode to External TAD.

See Related Information: Choose the Correct Receive Mode

Make sure your Dell machine’s Easy Receive feature is turned On. Easy Receive is a feature that allows you to receive a fax even if you answered the call on an external or extension telephone.

If you often get transmission errors due to possible interference on the telephone line, try changing the Compatibility setting to Basic (for VoIP).

Document is Jammed in the Top of the ADF Unit

1. Remove any paper from the ADF that is not jammed.
2. Open the ADF cover.
3. Pull the jammed document out to the left. If the document rips or tears, be sure you remove any debris or scraps to prevent future jams.

4. Close the ADF cover.
5. Press Cancel.

2. Lift the document cover.

3. Pull the jammed document out to the right. If the document rips or tears, be sure you remove any debris or scraps to prevent future jams.

4. Close the document cover.

5. Press Cancel.

**Remove Small Scraps of Paper Jammed in the ADF**

1. Lift the document cover.

2. Insert a piece of stiff paper, such as cardstock, into the ADF to push any small paper scraps through.

3. Close the document cover.

4. Press Cancel.
Paper Jams

Always remove the remaining paper from the paper tray and straighten the stack when you are adding new paper. This helps prevent multiple sheets of paper from feeding through the machine at one time and prevents paper jams.

• Paper is Jammed in the Paper Tray
• Paper is Jammed in the Output Paper Tray
• Paper is Jammed at the Back of the Machine
• Paper is Jammed inside the Machine
• Paper is Jammed in the 2-sided Tray

Paper is Jammed in the Paper Tray

If the machine’s control panel or the Status Monitor (for Macintosh only) displays there is a jam in the paper tray, do the following steps.

1. Pull the paper tray completely out of the machine.

2. Slowly pull out the jammed paper.

Pulling the jammed paper downward using both hands allows you to remove the paper more easily.

3. Fan the stack of paper to prevent further jams, and slide the paper guides to fit the paper size.
4. Make sure the paper is below the "MAX" mark.

5. Put the paper tray firmly back in the machine.

**Paper is Jammed in the Output Paper Tray**

When the paper is jammed in the output paper tray, do the following:

1. Use both hands to open the scanner.
2. Remove the paper.

3. Push the scanner down with both hands to close it.
**Paper is Jammed at the Back of the Machine**

If the machine’s control panel or the Status Monitor (for Macintosh only) indicates that there is a jam in the back (Rear) of the machine, complete the following:

1. Leave the machine turned on for 10 minutes. This allows the internal fan to cool the extremely hot parts inside the machine.
2. Open the back cover.

3. Pull the black tabs at the left and right sides toward you to release the fusing unit cover.
WARNING

HOT SURFACE

The machine’s internal parts will be extremely hot. Wait for the machine to cool down before touching them.

4. Use both hands to gently pull the jammed paper out of the fusing unit.

5. Close the fusing unit cover. Make sure the black tabs at the left and right sides lock into place.
6. Close the back cover until it locks in the closed position.

Paper is Jammed inside the Machine

If the machine's control panel or the Status Monitor (for Macintosh only) indicates that there is a jam inside the machine, do the following:

⚠️ CAUTION

Do not attempt to remove a paper jammed deeply inside the product, particularly a paper wrapped around a heat roller. Otherwise, it may cause injuries or burns, and even worse, may generate smoke if you keep operating the product with a paper jammed. Switch off the product promptly and contact your local Dell representative for more information.

1. Leave the machine turned on for 10 minutes. This allows the internal fan to cool the extremely hot parts inside the machine.

2. Open the front cover.

3. Remove the toner cartridge and drum unit assembly.
**WARNING**

HOT SURFACE

The machine's internal parts will be extremely hot. Wait for the machine to cool down before touching them.

4. Pull out the jammed paper slowly.

5. Install the toner cartridge and drum unit assembly into the machine.
6. Close the front cover.

**Paper is Jammed in the 2-sided Tray**

If the machine's control panel or the Status Monitor (for Macintosh only) indicates that there is a jam in the 2-sided paper tray, do the following:

1. Leave the machine turned on for 10 minutes. This allows the internal fan to cool the extremely hot parts inside the machine.

2. Pull the paper tray completely out of the machine.

3. At the back of the machine, pull the 2-sided tray completely out of the machine.

4. Pull the jammed paper out of the machine or out of the 2-sided tray.
5. Remove paper that may have jammed under the machine due to static electricity.

6. If paper is not caught inside the 2-sided tray, open the back cover.
WARNING

HOT SURFACE
The machine's internal parts will be extremely hot. Wait for the machine to cool down before touching them.

7. Use both hands to gently pull the jammed paper out of the back of the machine.

8. Close the back cover until it locks in the closed position.
9. Put the 2-sided tray firmly back in the rear of the machine.
10. Put the paper tray firmly back in the front of the machine.
Improve the Print Quality

If you have a print quality problem, print a test page first. If the printout looks good, the problem is probably not the machine. Check the interface cable connections and try printing a different document. If the printout or test page printed from the machine has a quality problem, check the examples of poor print quality in the table and follow the recommendations.

**IMPORTANT**

Using non-Dell supplies may affect the print quality, hardware performance, and machine reliability.

1. To get the best print quality, we suggest using recommended print media. Make sure you use paper that meets our specifications.

2. Check that the toner cartridge and drum unit are installed correctly.

Image skewed

- Make sure the paper or other print media is loaded correctly in the paper tray and the guides are not too tight or too loose against the paper stack.
- Set the paper guides correctly.
- The paper tray may be too full.
- Check the paper type and quality.
- Check for loose objects such as torn paper inside the machine.
- (For automatic 2-sided printing models) If the problem only occurs during 2-sided printing, check for torn paper in the 2-sided tray, verify the 2-sided tray is inserted completely and the back cover is closed completely.

Curled or wavy

- Check the paper type and quality. High temperatures and high humidity will cause paper to curl.
- If you do not use the machine often, the paper may have been in the paper tray too long. Turn over the stack of paper in the paper tray. Also, fan the paper stack, and then rotate the paper 180° in the paper tray.
- Open the back cover (face-up output tray) to let the printed paper exit onto the face-up output tray.
- Choose Reduce Paper Curl mode in the printer driver when you do not use our recommended print media.

Reset Functions
The following reset functions are available:

NOTE: Unplug the interface cable before you choose Network Settings Reset function, All Settings Reset function or Factory Reset function.

NOTE: Subdivided reset functions are not available for some models.

1. Machine Reset
   This function resets the following settings:
   • Programmed fax jobs in the memory (For Dell E515dn/Dell E515dw) (Delayed Fax, Batch TX)
   • Coverpage Message (For Dell E515dn/Dell E515dw)
   • Remote Fax Options (For Dell E515dn/Dell E515dw) (Remote Access Code, Fax Storage, Fax Forwarding and PC-Fax Send)
   • Setting Lock password (For Dell E515dn/Dell E515dw)
   • Language Setting

2. Network Settings Reset
   You can reset the print server back to its default factory settings, such as the password and IP address information.

3. Address Book and Fax Settings Reset (For Dell E515dn/Dell E515dw)
This function resets the following settings:

- Address Book
  (One Touch Dial / Speed Dial / Setup Groups)
- Programmed fax jobs in the memory
  (Delayed Fax, Batch TX)
- Station ID
  (name and number)
- Coverpage Message
- Remote Fax Options
  (Remote Access Code, Fax Storage, Fax Forwarding and PC-Fax Send)
- Report
  (Transmission Verification Report / Tel Index List / Fax Journal)
- Setting Lock password

4. All Settings Reset
You can reset all the machine's settings back to the settings that were set at the factory.
All Settings Reset takes less time than Factory Reset.

5. Factory Reset (For Dell E515dn/Dell E515dw)
Use the Settings Reset function to reset all machine settings to the settings originally set at the factory.
Factory Reset takes more time than All Settings Reset.
Dell strongly recommends you perform this operation when you dispose of the machine.

   NOTE: Unplug the interface cable before you choose Network Settings Reset function, All Settings Reset function
   or Factory Reset function.

Routine Maintenance

  You must replace supplies when the machine indicates that the life of the supply is over.

- Clean the Machine
  Clean the outside and inside of the machine regularly with a dry, lint-free cloth.

- Check the Remaining Life of Parts

- Pack and Ship Your Dell Machine

Replace Supplies

You must replace supplies when the machine indicates that the life of the supply is over.
You can replace the following supplies yourself.
Using non-Dell supplies may affect the print quality, hardware performance, and machine reliability.

**NOTE:** The toner cartridge and drum unit are two separate supplies. Make sure both are installed as an assembly.

To avoid any inconvenience, you may want to buy spare supplies to keep as replacements before the machine stops printing.

**WARNING**

- Never use a vacuum cleaner for spilled toner and residual toner in this product, toner cartridge or toner bottle. It may catch fire by electric sparks inside a vacuum cleaner and cause explosion. Use a broom or a wet cloth to wipe off the spills. If you spill a large volume of toner, contact your local Dell representative.
- Never throw a toner cartridge into an open flame. Remaining toner in the cartridge may catch fire and cause burn injuries or explosion. If you have a used toner cartridge no longer needed, contact your local Dell representative for its disposal.

**CAUTION**

- Keep drum cartridges (or drum if not a cartridge type) and toner cartridges out of the reach of children. If a child accidentally swallows toner, spit it out, rinse mouth with water, drink water and consult a physician immediately.
- When replacing drum cartridges (or drum if not a cartridge type) and toner cartridges, be careful not to spill the toner. In case of any toner spills, avoid contact with clothes, skin, eyes and mouth as well as inhalation.
- If toner spills onto your skin or clothing, wash it off with soap and water. If you get toner particles in the eyes, wash it out with plenty of water for at least 15 minutes until irritation is gone. Consult a physician if necessary.

**IMPORTANT**

- Dell machines are designed to work with toner of a particular specification and will work to a level of optimum performance when used with Dell Original toner cartridges. Dell cannot guarantee this optimum performance if toner or toner cartridges of other specifications are used. The machine may not detect toner or toner cartridges of other specifications correctly but may instead detect such items as standard yield toner cartridges. Dell does not therefore recommend the use of cartridges other than Dell Original cartridges with this machine, or the refilling of empty cartridges with toner from other sources. If damage is caused to the drum unit or other parts...
of this machine as a result of the use of toner or toner cartridges other than Dell Original products due to the incompatibility or lack of suitability of those products with this machine, any repairs required as a result may not be covered by the warranty.

- For best performance, use a Dell Original drum and toner cartridge. Printing with a third party drum unit or toner cartridge may reduce not only the print quality but also the quality and life of the machine itself. Warranty coverage may not apply to problems caused by the use of a third party drum or toner cartridge.

**NOTE**

- Be sure to seal up the used supplies tightly in a bag so that toner powder does not spill out of the cartridge.
- Discard the used supply according to local regulations, keeping it separate from domestic waste. If you have questions, contact your local waste disposal office.
- We recommend placing used supplies on a piece of paper to prevent accidentally spilling or scattering the material inside.
- If you use paper that is not a direct equivalent for the recommended print media, the life of supplies and machine parts may be reduced.
- The projected life for each of the toner cartridges is based on ISO/IEC 19752. Frequency of replacement will vary depending on the print volume, percentage of coverage, types of media used, and powering on/off the machine.
- Frequency of replacement supplies except toner cartridges will vary depending on the print volume, types of media used, and powering on/off the machine.
- Handle the toner cartridge carefully. If toner scatters on your hands or clothes, immediately wipe or wash it off with cold water.
- To avoid print quality problems, DO NOT touch the shaded parts shown in the illustrations.

Learn About The Toner Cartridge

The Standard toner cartridge can print approximately 1,200 pages *1. The High Yield toner cartridge can print approximately 2,600 pages *1. Actual page count will vary depending on your average type of document.

When a toner cartridge is running low, the control panel shows Toner Low indication.

The toner cartridge that comes with your Dell machine is a Starter toner cartridge. The approximate toner life may differ from the Standard toner cartridge.

Approximate life of Starter Toner Cartridge
Approximately 700 pages (Letter or A4 pages)*1

NOTE: It is a good idea to keep a new toner cartridge ready for use when you see the Toner Low warning.

NOTE: To ensure high quality printing, we recommend using only Genuine Dell Brand toner cartridges. When you want to buy toner cartridges, contact Dell Customer Service.

NOTE: DO NOT unpack the new toner cartridge until you are ready to install it.

NOTE: If a toner cartridge is left unpacked for a long time, the toner life will be shortened.

NOTE: Dell strongly recommends you DO NOT refill the toner cartridge provided with your machine. We also strongly recommend you continue to use only Genuine Dell Brand replacement toner cartridges. Use or attempted use of third party toner and/or cartridges in the Dell machine may cause damage to the machine and/or may result in unsatisfactory print quality. Our limited warranty coverage does not apply to any problem that is caused by the use of third party toner and/or cartridges. To protect your investment and obtain premium performance from the Dell machine, we strongly recommend the use of Genuine Dell Supplies.

*1: Approximate cartridge yield is declared in accordance with ISO/IEC 19752.

Replace the Toner Cartridge

1. Make sure the machine is turned on.
2. Open the front cover.
3. Remove the toner cartridge and drum unit assembly from the machine.

4. Push down the lock lever and take the toner cartridge out of the drum unit.
5. Unpack the new toner cartridge.
6. Remove the protective cover.

7. Put the new toner cartridge firmly into the drum unit until you hear it lock into place.

**NOTE:** Make sure you put the toner cartridge in correctly or it may separate from the drum unit.

8. Clean the corona wire inside the drum unit by gently sliding the tab from left to right and right to left several times.
NOTE: Be sure to return the tab to the Home position (▲). The arrow on the tab must be aligned with the arrow on the drum unit. If it is not, printed pages may have a vertical stripe.

9. Install the toner cartridge and drum unit assembly back into the machine.

10. Close the front cover of the machine.

NOTE: After replacing a toner cartridge, DO NOT turn off the machine or open the Front cover until the machine’s display returns to Ready Mode.

Learn About The Drum Unit

A new drum unit can print approximately 12,000 Letter or A4 size single-sided pages.

Drum wear and tear occurs due to use and rotation of the drum and interaction with paper, toner and other materials in the paper path. In designing this product, Dell decided to use the number of rotations of the drum as a reasonable determinant of the drum life. When a drum reaches the factory-established rotation limit corresponding to the rated page yield, the product’s LCD will advise you to replace the applicable drum. The product will continue to function; however, print quality may not be optimal.
NOTE

- If an unpacked drum unit is placed in direct sunlight (or room light for long periods of time), the unit may be damaged.
- There are many factors that determine the actual drum life, such as the temperature, humidity, type of paper, type of toner used and so on. Under ideal conditions, the average drum life is estimated at approximately 12,000 pages. The actual number of pages that your drum will print may be significantly less than this estimate. Because we have no control over the many factors that determine the actual drum life, we cannot guarantee a minimum number of pages that will be printed by your drum.
- For best performance, use only genuine Dell toner. The machine should be used only in a clean, dust-free environment with adequate ventilation. Printing with a non-Dell drum unit may reduce not only the print quality but also the quality and life of the machine itself. Warranty coverage does not apply to problems caused by the use of a non-Dell drum unit.

Replace the Drum Unit

1. Make sure the machine is turned on.
2. Open the front cover.
3. Remove the toner cartridge and drum unit assembly from the machine.
4. Push down the lock lever and take the toner cartridge out of the drum unit.

5. Unpack the new drum unit.

6. Put the toner cartridge firmly into the new drum unit until you hear it lock into place.

**NOTE:** Make sure you put the toner cartridge in correctly or it may separate from the drum unit.

7. Clean the corona wire inside the drum unit by gently sliding the tab from left to right and right to left several times.
NOTE: Be sure to return the tab to the Home position (▲). The arrow on the tab must be aligned with the arrow on the drum unit. If it is not, printed pages may have a vertical stripe.

8. Install the toner cartridge and drum unit assembly back into the machine.

9. Close the front cover of the machine.

Reset the Drum Counter

When you replace the drum unit with a new one, you must reset the drum counter by completing the following steps:

IMPORTANT

DO NOT reset the drum counter unless you are replacing the drum unit.

1. Open the front cover.
2. Press and hold OK for 2 seconds.
3. Press ▲ or 1 to reset the drum counter.

**Clean the Machine**

Clean the outside and inside of the machine regularly with a dry, lint-free cloth. When you replace the toner cartridge or the drum unit, make sure you clean the inside of the machine. If printed pages are stained with toner, clean the inside of the machine with a dry, lint-free cloth.

**WARNING**

- **DO NOT** use flammable substances, any type of spray, or an organic solvent/liquid containing alcohol or ammonia to clean the inside or outside of the product. Doing so could cause a fire or electrical shock. Instead, use only a dry, lint-free cloth.
- When cleaning this product, use the designated cleaning materials exclusive to it. Other cleaning materials may result in poor performance of the product. Never use aerosol cleaners to avoid catching fire and explosion.
**CAUTION**

When cleaning this product, always switch off and unplug it. Access to a live machine interior may cause electric shock.

**IMPORTANT**

- Use neutral detergents. Cleaning with volatile liquids such as thinner or benzine will damage the surface of the machine.
- DO NOT use cleaning materials that contain ammonia.
- DO NOT use isopropyl alcohol to remove dirt from the control panel. It may crack the panel.
- To avoid print quality problems, DO NOT touch the shaded parts shown in the illustrations.

Clean the Scanner

1. Press and hold \( \text{I} \) to turn off the machine.
2. Lift the document cover (1). Clean the white plastic surface (2) and scanner glass (3) underneath it with a soft lint-free cloth moistened with water.

3. In the ADF unit, clean the white bar (1) and the scanner glass strip (2) underneath it with a soft lint-free cloth moistened with water.

4. Close the document cover.

5. Press \( \text{I} \) to turn on the machine.

Clean the Corona Wire

If you have print quality problems or the control panel displays \text{Drum!} status, clean the corona wire.

1. Open the front cover.
2. Remove the toner cartridge and drum unit assembly from the machine.

3. Clean the corona wire inside the drum unit by gently sliding the tab from left to right and right to left several times.
**NOTE:** Be sure to return the tab to the Home position (▲). The arrow on the tab must be aligned with the arrow on the drum unit. If it is not, printed pages may have a vertical stripe.

4. Install the toner cartridge and drum unit assembly back into the machine.

5. Close the front cover of the machine.

**Clean the Drum Unit**

If your printout has dots or other repeating marks at 3.7 in. (94 mm) intervals, the drum may have foreign material, such as glue from a label stuck on the drum surface. Follow these steps to solve the problem:

1. Press and hold ▼ to turn off the machine.
2. Open the front cover.
3. Remove the toner cartridge and drum unit assembly from the machine.

4. Push down the lock lever and take the toner cartridge out of the drum unit.
5. Turn the drum unit as shown in the illustration. Make sure that the drum unit gear is on the left side.

6. Turn the edge of the drum unit toward you by hand while looking at surface of the suspected area.

**NOTE:** To avoid print quality problems, DO NOT touch the surface of the drum unit except the edge.

7. Wipe the surface of the drum gently with a dry cotton swab until the mark on the surface comes off.
NOTE

DO NOT clean the surface of the photosensitive drum with a sharp object or any liquids.

8. Put the new toner cartridge firmly into the drum unit until you hear it lock into place.

NOTE: Make sure you put the toner cartridge in correctly or it may separate from the drum unit.

9. Install the toner cartridge and drum unit assembly back into the machine.

10. Close the front cover of the machine.

11. Press \( \text{ } \) to turn on the machine.
Clean the Paper Pick-up Rollers

Cleaning the paper pick-up rollers periodically may prevent paper jams by insuring the proper feeding of paper.

If you have paper feed problems, clean the pick-up rollers as follows:

1. Press and hold \( \text{on} \) to turn off the machine.
2. Pull the paper tray completely out of the machine.
3. If paper is loaded or something is stuck inside in the paper tray, remove it.
4. Tightly wring out a lint-free cloth soaked in lukewarm water, and then wipe the separator pad on the paper tray to remove dust.
5. Wipe the two pick-up rollers inside the machine to remove dust.
6. Reload the paper and put the paper tray firmly back in the machine.

7. Press \( \text{(on)} \) to turn on the machine.

**Check the Remaining Life of Parts**

1. Press **Menu**.
2. Press \( \text{\uparrow} \) or \( \text{\downarrow} \) to display the **Machine Info.** option, and then press **OK**.
3. Press \( \text{\uparrow} \) or \( \text{\downarrow} \) to display the **Parts Life** option, and then press **OK**.
4. Press \( \text{\uparrow} \) or \( \text{\downarrow} \) to select the **Toner** or **Drum** option, and then press **OK**.
   The LCD displays the approximate remaining toner or drum life.
5. Press **Cancel**.

**Pack and Ship Your Dell Machine**

**WARNING**
When you move the machine, grasp the side handholds that are under the scanner. DO NOT carry the machine by holding it at the bottom.

**NOTE:** If for any reason you must ship your machine, carefully repack the machine in the original packaging to avoid any damage during transit. The machine should be adequately insured with the carrier.

1. Press and hold \( \text{(on)} \) to turn off the machine. Leave the machine turned off for at least 10 minutes to cool down.
2. Disconnect all the cables, and then unplug the power cord from the AC power outlet.
   **NOTE:** The machine is equipped with a non-detachable AC power cord depending on the model.

3. Remove the toner cartridge and drum unit assembly.

4. Push down the lock lever and take the toner cartridge out of the drum unit.

5. Put the protective material on the toner cartridge. Put it in a plastic bag.

6. Put the protective material (1) in the machine to the left as shown in the illustration.
7. Install only the drum unit back into the machine.

8. Close the front cover.

9. Put the machine into the bag it originally came in.

10. Pack the machine and the printed materials in the original carton with the original packing material as shown below.
NOTE: Put the AC power cord and printed materials in the original carton as shown in the illustration.

11. Close the carton and tape it shut.
Machine Settings

Customize settings and features, create shortcuts, and work with options displayed on the machine's LCD to make your Dell machine a more efficient work tool.

- **General Settings**
- **Print Reports**
- **Settings and Features Tables**
  The Settings tables will help you understand the menu selections and options that are found in the machine’s programs.

**General Settings**

- **Change the Default Mode**
  When the machine is idle or you press Cancel, the machine will return to the mode you set.

- **Set the Mode Timer**
  The machine returns to the default mode after use of the machine in a mode other than the default mode. The Mode Timer setting defines how much time the machine takes after the last operation to return to the default mode. If you choose Off, the machine will stay in the mode you used last.

- **Adjust the Machine Volume**

- **Change for Daylight Saving Time Automatically**
  The machine to change automatically for Daylight Saving Time.

- **Set the Sleep Mode Countdown**
  The Sleep Mode (or Power Save Mode) setting can reduce power consumption. When the machine is in Sleep Mode, it acts as though it is turned off. The machine will wake up and start printing when it receives a print job or a fax. Use these instructions to set a time delay to send the machine into Sleep Mode.

- **About Deep Sleep Mode**
  If the machine is in Sleep Mode and does not receive any jobs for certain length of time, based on your model and settings, the machine will automatically enter Deep Sleep Mode. You can set the length of time before the machine enters Deep Sleep Mode between 10 to 60 minutes. The default time is 11 minutes.

- **Set Auto Power Off Mode**
  If the machine is in Deep Sleep Mode for certain length of time, based on your model and settings, the machine will go into Power Off Mode automatically. The machine does not go into Power Off Mode when the machine is connected to a wired or wireless network.

- **Set Your Station ID**
  Set the machine to print your Station ID and the fax's date and time at the top of each fax you send.

- **Set Tone or Pulse Dialing Mode**
  Your Dell machine is set for a Tone dialing service. If you have a Pulse dialing (rotary) service, you must change the dialing mode.

- **Add a Prefix to Every Fax Number**
  The Dial Prefix setting will automatically dial a predefined number before every fax number you dial. For example: If your telephone system requires a 9 to dial an outside number, use this setting to automatically dial 9 for every fax you send.

- **Prevent Dialing a Wrong Number (Dial Restriction)**
  This feature is to prevent users from sending a fax or call to the wrong number by mistake. You can set the machine to restrict dialing when you use the dial pad, Address Book and Shortcuts.

- **Set Quiet Mode**
  Use Quiet Mode to reduce printing noise. When Quiet Mode is turned On, the print speed becomes slower. The factory setting is Off.

- **In the Event of Power Failure (Memory Storage)**

- **Change the Language on the LCD**
  Change the LCD language if needed.

### Change the Default Mode

This feature is to prevent users from sending a fax or call to the wrong number by mistake. You can set the machine to restrict dialing when you use the dial pad, Address Book and Shortcuts.

1. Press Menu.
2. Press ▲ or ▼ to display the Fax option, and then press OK.
3. Press ▲ or ▼ to display the Dial Restrict option, and then press OK.

4. Press ▲ or ▼ to display your preferred option, and then press OK.
   - Dial Pad
   - One Touch Dial
   - Speed Dial

5. Press ▲ or ▼ to select one of the following options, and then press OK.

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enter # twice</td>
<td>The machine will prompt you to re-enter the number, and then if you re-enter the same number correctly, the machine will start dialing. If you re-enter the wrong number, the LCD will display an error message.</td>
</tr>
<tr>
<td>On</td>
<td>The machine will restrict all fax sending and outbound calls for that dialing method.</td>
</tr>
<tr>
<td>Off</td>
<td>The machine does not restrict the dialing method.</td>
</tr>
</tbody>
</table>

- The Enter # twice setting will not work if you use an external phone or press Hook before entering the number. You will not be asked to re-enter the number.
- If you choose On or Enter # twice, you cannot use the Broadcasting feature.

6. Press Cancel.

Set Quiet Mode

Use Quiet Mode to reduce printing noise. When Quiet Mode is turned On, the print speed becomes slower. The factory setting is Off.

1. Press Menu.
2. Press ▲ or ▼ to display the General Setup option, and then press OK.
3. Press ▲ or ▼ to display the Ecology option, and then press OK.
4. Press ▲ or ▼ to display the Quiet Mode option, and then press OK.
5. Press ▲ or ▼ to display the On or Off option, and then press OK.
6. Press Cancel.

In the Event of Power Failure (Memory Storage)

Your menu settings are stored permanently, and in the event of a power failure will not be lost. Temporary settings (for example, Contrast, Overseas Mode) will be lost.

- (Dell E515dn/Dell E515dw)
  During a power failure the machine will retain the date and time and programmed fax timer jobs (for example: Delayed Fax) for approximately 60 hours. Other fax jobs in the machine's memory will not be lost.

Environmental Information Notice

At Dell, we aim to make “being environmentally conscious” easier, more efficient and more cost effective for our customers. We thank you for choosing Dell printers, and here are some useful environmental information regarding this printer before you begin using:

1. Choice to print on various print media ranging from recycled, virgin paper to light weight paper in the range of 60-163 g/m² certified under environmental stewardship initiatives.

2. Choice to print on 60 g/m² paper which contains less raw material per print, helping you contribute to saving significant environment resources.

3. Designed to be energy efficient with power saving modes, your new Dell printer is Energy Star qualified so you consume less power during printing and standby modes. Efficient power management in your Dell printer helps you conserve energy resources and gain cost savings for your power usage.

4. If supported, use duplex printing function to print on both sides of paper so you can help reduce the consumption of raw materials used to manufacture paper.
   Information on setting the supported duplex printing function as default can be found on the printer User’s Guide found on the Software and Documentation disc. For the latest User’s Guide, check our website at support.dell.com.

For detail information on environmental performance of product, visit Dell Regulatory Environment Data Sheet website at www.dell.com/regulatory_compliance.

For detail information on paper types and toner/ink cartridge yields for this printer, check your local country Dell website for the printer information at dell.com.

Dell Technical Support Policy

Technician-assisted technical support requires the cooperation and participation of the customer in the troubleshooting process and provides for restoration of the operating system, software program and hardware drivers to the original default configuration as shipped from Dell, as well as the verification of appropriate functionality of the printer and all Dell-installed hardware. In addition to this technician assisted technical support, online technical support is available at Dell Support. Additional technical support options may be available for purchase.

Warranty and Return Policy
Dell Inc. ("Dell") manufactures its hardware products from parts and components that are new or equivalent to new in accordance with industry-standard practices. For information about the Dell warranty for your printer, see www.dell.com/support.

Recycling Information
It is recommended that customers dispose of their used computer hardware, monitors, printers, and other peripherals in an environmentally sound manner. Potential methods include reuse of parts or whole products and recycling of products, components, and/or materials.
For specific information on Dell's worldwide recycling programs, see www.dell.com/recycle.

SAFETY: Laser Printer

Internal laser radiation
Max. Radiation Power: 25mW
Wave Length: 770 - 800 nm
Laser Class: Class 3B

SAFETY: General Safety

• Ventilate well during extended operation or mass copying. It may affect the office air environment due to odor such as ozone in a poorly ventilated room. Provide proper ventilation to ensure the comfortable and safe environment.
• This equipment is also designed for IT power system with phase to phase voltage 230V.
  (For Norway Only).

FCC Part68 comment,

• If your home has specially wired alarm equipment connected to the telephone line, ensure the installation of this equipment does not disable your alarm equipment. If you have questions about what will disable alarm equipment, call your telephone company or a qualified installer.

Information regarding recycled paper

• Recycled paper is of the same quality of paper made from original forest sources. Standards governing modern recycled paper ensure that it meets the highest quality requirements for different printing processes. The imaging equipment supplied by the VA signatories is suitable for using with recycled paper meeting the EN 12281:2002 standard.
• Purchasing recycled paper saves natural resources and promotes the circular economy. Paper is made using cellulose fibres from wood. Collecting and recycling paper extends the life of fibres over multiple life cycles making the best use of the resources.
• The recycled paper production process is shorter. The fibres have already been processed; so less water, chemicals and energy are used.
• Paper recycling has the benefit of saving carbon by diverting paper products from alternative disposal routes such as landfill and incineration. Landfill waste emits methane gas which has a powerful greenhouse effect.

Glossary

This is a comprehensive list of features and terms that appear in Dell manuals. Availability of these features depends on the model you purchased.

A

Ad-Hoc Mode
The mode of operation in a wireless network, in which all devices (machines and computers) are connected without an access point/router.

Address Book
Names and numbers you have stored for easy dialing.

Address Book List
A listing of names and numbers stored in the Address Book memory, in alphabetical order.

ADF (Automatic Document Feeder)
The document can be placed in the ADF and scanned one page at a time automatically.

AES
Advanced Encryption Standard (AES) is the Wi-Fi®-authorized strong encryption standard.

AOSS™
AirStation One-Touch Secure System (AOSS™) is a system provided by Buffalo Technology. AOSS™ allows you to configure a secure wireless connection with the push of a button.

APIPA
If you do not assign an IP address manually (using the control panel [for LCD models] of the machine) or automatically (using a DHCP, BOOTP, or RARP server), the Automatic Private IP Addressing (APIPA) protocol will automatically assign an IP address from the range 169.254.1.0 to 169.254.254.255.

APOP
Authenticated Post Office Protocol (APOP) expands POP3 (the Internet receiving protocol) to include an authentication method that encrypts the password when the client receives email.

ARP
Address Resolution Protocol (ARP) performs mapping of an IP address to a MAC address in a TCP/IP network.

Authentication
Most wireless networks use some kind of security settings. These security settings define the authentication (how the device identifies itself to the network) and encryption (how the data is encrypted as it is sent on the network). If you do not correctly specify these options when you are configuring your Dell wireless machine, it will not be able to connect to the wireless network. Therefore, care must be taken when configuring these options.

Authentication Methods for a Personal Wireless Network
A personal wireless network is a small network (such as a home wireless network) without IEEE 802.1x support.

• Open system
  Wireless devices are allowed to access the network without any authentication.

• Shared key
  A secret pre-determined key is shared by all devices that will access the wireless network. The Dell wireless machine uses the WEP key as the pre-determined key.
• WPA-PSK/WPA-2-PSK
  Enables a Wi-Fi Protected Access® Pre-shared key (WPA-PSK/WPA2-PSK), which enables the Dell wireless
  machine to associate with access points using TKIP for WPA-PSK or AES for WPA-PSK and WPA2-PSK
  (WPA-Personal).

Auto Reduction
Reduces the size of incoming faxes.

Automatic Fax Transmission
Sending a fax without picking up the handset of the external telephone or pressing Hook.

Automatic Redial
A feature that enables your machine to redial the last fax number after five minutes if the fax did not go through
because the line was busy.

B

Backup Print
Your machine prints a copy of every fax that is received and stored in memory. This is a safety feature so you will not
lose messages during a power failure.

Beeper Volume
Volume setting for the sound when you press a key or make an error.

BOOTP
The Bootstrap Protocol (BOOTP) is a network protocol used by a network client to obtain an IP Address from a
configuration server.

NOTE: To use BOOTP, contact your network administrator.

Broadcasting
The ability to send the same fax message to more than one location.

C

Caller ID
A service purchased from the telephone company that lets you see the number (or name) of the party calling you.

Cancel Job
Cancels a programmed print job and clears it from the machine's memory.

Channels
Wireless networks use channels. Each wireless channel is on a different frequency. There are up to 14 different
channels that can be used when using a wireless network. However, in many countries the number of channels
available is restricted.

CNG Tones
The special tones (beeps) sent by fax machines during automatic transmission to tell the receiving machine that a
fax machine is calling.

Coding Method
Method of coding the information contained in the document. All fax machines must use a minimum standard of
Modified Huffman (MH). Your machine is capable of greater compression methods, Modified Read (MR), Modified
Modified Read (MMR) and JBIG, if the receiving machine has the same capability.
Communication Error (or Comm. Error)
An error during fax sending or receiving, usually caused by line noise or static.

Compatibility Group
The ability of one fax unit to communicate with another. Compatibility is assured between ITU-T Groups.

Contrast
Setting to compensate for dark or light documents, by making faxes or copies of dark documents lighter and light documents darker.

Custom Raw Port
Custom raw port is a commonly used printing protocol on a TCP/IP network that enables interactive data transmission. Default is Port 9100.

Delayed Fax
Sends your fax at a specified later time that day.

Density
Changing the Density makes the whole image lighter or darker.

DHCP
The Dynamic Host Configuration Protocol (DHCP) is a network protocol that is used to configure network devices so that they can communicate on an IP Network.

NOTE: To use DHCP, contact your network administrator.

Digital Signature
A Digital Signature is a value computed with a cryptographic algorithm and appended to a data object in such a way that any recipient of the data can use the signature to verify the data’s origin and integrity.

Distinctive Ring
This feature is available only in the USA and Canada.
A subscriber service purchased from the telephone company that gives you another telephone number on an existing telephone line. The Dell machine uses the new number to simulate a dedicated fax line.

DNS Client
The Dell print server supports the Domain Name System (DNS) client feature. This feature allows the print server to communicate with other devices using its DNS name.

DNS Server
The Domain Name System (DNS) is a technology to manage the names of web sites and internet domains. A DNS server allows your computer to automatically find its IP address.

Dual Access
Your machine can scan outgoing faxes or scheduled jobs into memory at the same time it is sending a fax or receiving or printing an incoming fax.

Easy Receive
Enables your machine to respond to CNG tones if you interrupt a fax call by answering it.

ECM (Error Correction Mode)
Detects errors during fax transmission and resends the pages of the fax that had an error.

Encryption
Most wireless networks use some kind of security settings. These security settings define the authentication (how the device identifies itself to the network) and encryption (how the data is encrypted as it is sent on the network). If you do not correctly specify these options when you are configuring your Dell wireless machine, it will not be able to connect to the wireless network. Therefore, care must be taken when configuring these options.

Encryption Methods for a Personal Wireless Network
A personal wireless network is a small network (such as a home wireless network) without IEEE 802.1x support.
- None
  No encryption method is used.
- WEP
  When using Wired Equivalent Privacy (WEP) the data is transmitted and received with a secured key.
- TKIP
  Temporal Key Integrity Protocol (TKIP) provides per-packet key mixing a message integrity check and rekeying mechanism.
- AES
  Advanced Encryption Standard (AES) provides stronger data protection using a symmetric-key encryption.

NOTE: IEEE 802.11n does not support either WEP or TKIP as an encryption method.

NOTE: To connect to your wireless network using IEEE 802.11n, we recommend selecting AES.

Extension Telephone
A telephone on the fax number that is plugged into a separate telephone wall jack.

External Telephone
A telephone that is plugged into the EXT jack of your machine.

F

F/T Ring Time
The length of time that the Dell machine pseudo/double-rings (when the Receive Mode setting is Fax/Tel) to notify you to pick up a voice call that it answered.

Fax Forwarding
Sends a fax received into the memory to another pre-programmed fax number.

Fax Journal
Lists information about the last 200 incoming and outgoing faxes. TX means Transmit. RX means Receive.

Fax Receive Code (Fax/Tel Mode Only)
Press this code (*51) when you answer a fax call on an extension or external telephone.

Fax Storage
You can store faxes in the memory.

Fax Tones
The signals sent by sending and receiving fax machines while communicating information.

Fax/Tel
You can receive faxes and telephone calls. Do not use this mode if you are using a telephone answering device
(TAD).

**Fine Resolution**
Resolution is $203 \times 196$ dpi. It is used for small print and graphs.

**FTP**
The File Transfer Protocol (FTP) allows the Dell machine to scan black and white or color documents directly to an FTP server located locally on your network or on the Internet.

**G**

**Gateway**
A gateway is a network point that acts as an entrance to another network and sends data transmitted via the network to an exact destination. The router knows where to direct data that arrives at the gateway. If a destination is located on an external network, the router transmits data to the external network. If your network communicates with other networks, you may need to configure the Gateway IP address. If you do not know the Gateway IP address, then contact your Network Administrator.

**Gray Scale**
The shades of gray available for copying and faxing photographs.

**Group Number**
A combination of Address Book numbers that are stored in Address Book for Broadcasting.

**H**

**HTTP (Web Server)**
Hypertext Transfer Protocol (HTTP) is used to transmit the data between a web server and a web browser. The Dell print server is equipped with a built-in web server that allows you to monitor its status or change some of its configuration settings using a web browser.

**I**

**Infrastructure Mode**
The mode of operation in a wireless network, in which all devices (machines and computers) are connected via an access point/router.

**Internet Fax (available as a download)**
Internet Fax (I-Fax) allows you to send and receive fax documents using the Internet as the transport mechanism. To use this feature, go to the downloads page on the Dell website at http://www.dell.com/. Before using this feature, configure the necessary machine's settings using the machine's control panel.

**IP Address**
An Internet Protocol (IP) address is a series of numbers that identifies each device connected to a network. An IP address consists of four numbers separated by dots. Each number is between 0 and 255. Example: In a small network, you would normally change the final number.

192.168.1.1
192.168.1.2
192.168.1.3
How the IP address is assigned to your print server:
If you have a DHCP/BOOTP/RARP server in your network, the print server will automatically obtain its IP address from that server.

**NOTE:** On smaller networks, the DHCP server may also be the Router.

If you do not have a DHCP/BOOTP/RARP server, the Automatic Private IP Addressing (APIPA) protocol will automatically assign an IP address from the range 169.254.1.0 to 169.254.254.255.

**IPP**
The Internet Printing Protocol (IPP Version 1.0) allows you to print documents directly to any accessible machine via the Internet.

**IPv6**
IPv6 is the next generation Internet protocol.

**J**

**Journal Period**
The pre-programmed time period between automatically printed Fax Journal Reports. You can print the Fax Journal on demand without interrupting the cycle.

**L**

**LLMNR**
The Link-Local Multicast Name Resolution (LLMNR) protocol resolves the names of neighboring computers, if the network does not have a Domain Name System (DNS) server. The LLMNR Responder feature works in both the IPv4 or IPv6 environment when using a computer that has the LLMNR Sender feature, such as Windows Vista® and Windows® 7.

**LPD**
Line Printer Daemon (LPD or LPR) protocol is a commonly-used printing protocol on a TCP/IP network, mainly for UNIX®-based operating systems.

**M**

**MAC Address**
The MAC Address (Ethernet Address) is a unique number assigned for the machine's network interface. You can check your machine's MAC Address on the Dell machine's control panel and in the Network Configuration Report.

**Manual Fax**
When you press Hook to hear the receiving fax machine answer before you press Fax Start to begin transmission.

**MDN**
The Message Disposition Notification (MDN) field of the control panel menu requests the status of the Internet Fax/E-mail message after delivery through the Send Mail Transfer Protocol (SMTP) transport system. Once the message has arrived at the receiver, this data is used when the machine or user reads or prints the received Internet Fax or E-mail. For example, if the message is opened for reading or is printed, the receiver sends back a notification to the original sending machine or user.

**NOTE:** The receiver must support the MDN field to be able to send a notification report, otherwise the request will be
mDNS
Multicast DNS (mDNS) allows the Dell print server to automatically configure itself to work in an OS X Simple Network Configuration system.

Memory Receive
Receives faxes into the machine’s memory when the machine is out of paper.

N

NetBIOS Name Resolution
Network Basic Input/Output System (NetBIOS) name resolution enables you to obtain the IP address of the other device using its NetBIOS name during the network connection.

Network Configuration Report
The Network Configuration Report prints a report listing the current network configuration, including the network print server settings.

Network Connection Repair Tool
The Network Connection Repair Tool is a program Dell provides to correct the driver’s settings so that they match the machine’s network settings. To use the Network Connection Repair Tool, ask your network administrator.

Network Key
The Network Key is a password, which is used when the data is encrypted or decrypted. The Network Key is also described as the Password, Security Key, or Encryption Key. The table shows the number of characters of the key to use for each setting.

Open system/Shared key with WEP
This key is a 64-bit or a 128-bit value that must be entered in an ASCII or hexadecimal format.

<table>
<thead>
<tr>
<th>ASCII</th>
<th>Hexadecimal</th>
</tr>
</thead>
<tbody>
<tr>
<td>64 (40) bit</td>
<td>Uses five text characters. For example, &quot;WSLAN&quot; (case-sensitive).</td>
</tr>
<tr>
<td>128 (104) bit</td>
<td>Uses 13 text characters. For example, &quot;Wirelesscomms&quot; (case-sensitive).</td>
</tr>
</tbody>
</table>

WPA-PSK/WPA2-PSK and TKIP or AES
Uses a Pre-Shared Key (PSK) that is eight or more characters in length, up to a maximum of 63 characters.

Network PC-FAX
Use Network PC-FAX to send a file from your computer as a fax.

Network Shared Printing
Network Shared Printing is a type of printing in a network shared environment. In a network shared environment, each computer sends data via a server or print server.

Node Name
The Node Name is a machine name on the network. This name is often referred to as a NetBIOS name; it will be ignored.
the name that is registered by the WINS server on your network. Dell recommends the name "DELLxxxxx" (where "xxxxx" is the first six digits of your machine's MAC address / ethernet address.)

O

OCR (Optical Character Recognition)
Dell software application converts an image of text to text you can edit.

Open System
Open System is one of the network authentication methods. Under open system authentication, any wireless devices are allowed to access the network without requiring a WEP key.

Out of Paper Reception
Receives faxes into the machine's memory when the machine is out of paper.

Overseas Mode
Makes temporary changes to the fax tones to accommodate noise and static on overseas telephone lines.

P

Paging
This feature is available only in the USA and Canada.
This feature enables your machine to call your cell phone or pager when a fax is received into its memory.

Pause
Allows you to place a delay in the dialing sequence while you are dialing or while you are storing Address Book numbers. Press Pause on the LCD as many times as needed for longer pauses.

Peer-to-Peer
Peer-to-Peer is a type of printing in a peer-to-peer environment. In a peer-to-peer environment, each computer sends and receives data directly to and from each device. There is no central server controlling access or machine sharing.

Photo resolution (B&W only)
A resolution setting that uses varying shades of gray for the best representation of photographs.

Protocols
Protocols are the standardized sets of rules for transmitting data on a network. Protocols allow users to gain access to network-connected resources. The print server used on your Dell machine supports the Transmission Control Protocol/Internet Protocol (TCP/IP) protocol.

Pulse
This feature is not available in some countries.
A form of rotary dialing on a telephone line.

R

RARP
Reverse Address Resolution Protocol (RARP) finds the logical address for a machine that knows only its physical address.

NOTE: To use RARP, contact your network administrator.

Real Time Transmission
When memory is full, you can send faxes in real time.

**Remaining Jobs**
You can check which programmed fax jobs are waiting in the memory and cancel the jobs individually.

**Remote Access Code**
Your own four-digit code (– – – *) that allows you to call and access your machine from a remote location.

**Remote Activation Code (Fax/Tel Mode only)**
Press this code (*51) when you answer a fax call on an extension or external telephone.

**Remote Deactivation Code (Fax/Tel Mode only)**
When the machine answers a voice call, it fast double-rings. You can pick up at an extension or external telephone by pressing this code (#51).

**Remote Retrieval Access**
The ability to access your machine remotely from a touch tone telephone.

**Resolution**
The number of vertical and horizontal lines per inch.

**Ring Delay**
The number of rings before the machine answers in Fax Only and Fax/Tel modes.

**Ring Volume**
Volume setting for the machine’s ring.

---

**S**

**Scan to E-mail Server**
The Scan to E-mail Server feature lets you scan a black and white or color document and send it directly to an email address from the machine.

**Scanning**
The process of sending an electronic image of a paper document into your computer.

**Search**
An alphabetical electronic listing of stored Address Book and Group numbers.

**Settings Tables**
At-a-glance instructions that show all the settings and options that are available for setting up your machine.

**SMTP Client**
Simple Mail Transfer Protocol (SMTP) client is used to send emails via the Internet or Intranet.

**SMTP-AUTH**
SMTP Authentication (SMTP-AUTH) expands SMTP (the Internet email sending protocol) to include an authentication method that ensures the true identity of the sender is known.

**SNMP**
The Simple Network Management Protocol (SNMP) is used to manage network devices including computers, routers and Dell network-ready machines. The Dell print server supports SNMPv1, SNMPv2c and SNMPv3.

**SNMPv3**
Simple Network Management Protocol version 3 (SNMPv3) provides user authentication and data encryption to manage network devices securely.

**SNTP**
The Simple Network Time Protocol (SNTP) is used to synchronize computer clocks on a TCP/IP network. You can configure the SNTP settings using Web Based Management.

SSID
Each wireless network has its own unique network name and it is technically referred to as a Service Set Identifier (SSID). The SSID is a 32-byte or less value and is assigned to the access point. The wireless network devices you want to associate to the wireless network should match the access point. The access point and wireless network devices regularly send wireless packets (referred to as beacons), which contain the SSID information. When your wireless network device receives a beacon, you can identify the wireless network that is close enough for the radio waves to reach your device.

Standard resolution
203 × 98 dpi (black and white). 203 × 196 dpi (color). It is used for regular sized text and the quickest transmission.

Station ID
The stored information that appears on the top of faxed pages. It includes the sender's name and fax number.

Status Monitor
The Status Monitor utility is a configurable utility for Macintosh users to monitor the status of one or more devices, allowing you to get immediate notification when there is a problem, for example, when the machine runs out of paper or jams.

Subnet Mask
A subnet mask allows you to identify which part of an IP address is used as the network address and which part is used as the host address.

In the following example, the last segment of the IP address is known as the host address and the first three segments are the network address.

Example: Computer 1 can talk to Computer 2

- Computer 1
  IP Address: 192.168.1.2
  Subnet Mask: 255.255.255.0
- Computer 2
  IP Address: 192.168.1.3
  Subnet Mask: 255.255.255.0

NOTE: 0 denotes that there is no limit to communication at this part of the address.

Super Fine resolution (B&W only)
203 × 392 dpi. Best for very small print and line art.

T

TAD (Telephone Answering Device)
You can connect an external device or answering machine to the EXT. jack of your machine.

TCP/IP
Transmission Control Protocol/Internet Protocol (TCP/IP) is the most popular set of protocols used for communication, such as Internet and email. This protocol can be used in almost all operating systems, including Windows®, Windows Server®, OS X and Linux®.
Telephone Answer Code (Fax/Tel Mode only)
When the machine answers a voice call, it pseudo/double-rings. You can pick up at an extension telephone by pressing this code (#51).

Temporary Settings
You can choose certain options for each fax transmission and copy without changing the default settings.

TKIP
Temporal Key Integrity Protocol (TKIP) is one of the encryption methods adopted by WPA™ to be used in a wireless network. TKIP provides per-packet key mixing, a message integrity check and rekeying mechanism.

Tone
This feature is not available in some countries.
A form of dialing on the telephone line used for Touch Tone telephones.

Transmission
The process of sending faxes over the telephone lines from your machine to the receiving fax machine.

Transmission Verification Report
A report for each transmission, that shows its date, time and number.

U

User Settings List
A printed report that shows the current settings of the machine.

V

Vertical Pairing
Vertical Pairing is a technology for Windows® that allows your Vertical Pairing-supported wireless machine to connect to your Infrastructure network using the PIN Method of Wi-Fi Protected Setup™ and the Web Services feature. It also enables printer driver installation from the printer icon in the Add a device screen.

W

Web Based Management
A standard Web Browser can be used to manage your machine using the Hyper Text Transfer Protocol (HTTP). You can perform the function listed or get the following information from a machine on your network using a web browser:

• Machine status information
• Change Fax configuration items, such as General Setup, Address Book settings and Remote Fax (Dell E515dn/ Dell E515dw)
• Change network settings, such as TCP/IP information
• Configure Store Print Log to Network
• Configure Scan to FTP
• Software version information of the machine and print server
• Change network and machine configuration details

NOTE: In order to use Web Based Management, you must use the TCP/IP protocol on your network and have a valid
IP address programmed into the print server and your computer.

**Web Services**
The Web Services protocol enables Windows Vista®, Windows® 7, or Windows® 8 users to install the drivers used for printing and scanning by right-clicking on the machine icon in the **Network** folder. Web Services also lets you check the current status of the machine from your computer.

**WEP**
Wired Equivalent Privacy (WEP) is one of the encryption methods used in a wireless network. When using WEP, the data is transmitted and received with a secure key.

**Wi-Fi Direct**
Wi-Fi Direct is one of the wireless configuration methods developed by the Wi-Fi Alliance®.

**WINS**
Windows® Internet Name Service (WINS) is an information-providing service for NetBIOS name resolution. It consolidates an IP address and a NetBIOs name that is in the local network.

**WINS Server**
Windows® Internet Name Service (WINS) Server maps IP addresses to computer names (NetBIOS names) in a Windows® network.

**WLAN Report**
The WLAN Report prints your machine’s wireless status report. If the wireless connection fails, check the error code on the printed report.

**WPA-PSK/WPA2-PSK Authentication Method**
WPA-PSK/WPA2-PSK authentication method enables a Wi-Fi Protected Access® Pre-shared key (WPA-PSK/WPA2-PSK), which enables the Dell wireless machine to associate with access points using TKIP for WPA-PSK or AES for WPA-PSK and WPA2-PSK (WPA-Personal).

**WPS**
Wi-Fi Protected Setup™ (WPS) is a standard that allows setup of secured wireless network. WPS was created by the Wi-Fi Alliance® in 2007.

**X**

**Xmit Report (Transmission Verification Report)**
A listing for each transmission, that shows its date, time and number.
